EJX110B, EJX310B, and EJX430B
Differential Pressure and
Pressure Transmitters

GS 01C27B01-01EN

The high performance differential pressure and pressure transmitters EJX110B, EJX310B, and EJX430B feature single crystal silicon resonant sensor and are suitable to measure liquid, gas, or steam flow as well as liquid level, density, and pressure. These transmitters transmit not only process variables but also the setting parameters using wireless signal. In case of the battery powered type, the transmitters run on internal batteries, and the installation cost can be decreased since hard-wiring is not required. The communication is compliant with ISA100.11a protocol specifications.

FEATURES

- Long Life Battery Design**
 Ultra low current consumption design using two high capacity lithium-thionyl chloride batteries provide wireless operation for years.

• Total Probable Error (EJX110B M capsule)

±0.12% of Span @1:1 to 5:1 Rangedown
 Total probable error, known as a measure of the total performance of the transmitters under the condition of fixed line pressure.

$$\text{Total Probable Error} = \pm \sqrt{E_1^2 + E_2^2 + E_3^2}$$

- E1: Reference Accuracy of Calibrated Span
- E2: Ambient Temperature Effects per 28°C change
- E3: Static Span Effects per 6.9 MPa change

• Total Accuracy (EJX110B M capsule)

±0.12% of Span @1:1 Rangedown
 ±0.25% of Span @5:1 Rangedown
 Total accuracy is a comprehensive measure of transmitter total performance, covering all major factors in actual installation, that cause errors in measurement.
 As a standard measure, YOKOGAWA uses this to evaluate transmitter performance.

$$\text{Total Accuracy} = \pm \sqrt{E_1^2 + E_2^2 + (E_3 + E_4)^2 + E_5^2}$$

- E1: Reference Accuracy of Calibrated Span
- E2: Ambient Temperature Effects per 28°C change
- E3: Static Span Effects per 6.9 MPa change
- E4: Static Zero Effects per 6.9 MPa change
- E5: Overpressure Effects upto overpressure 25 MPa

Not only a day-to-day changes in temperature can affect the measurement and lead to unnoticed errors; fluctuation of line pressure, incorrect operation of three/five valve manifold leading to over-pressure events, and other phenomena can have the similar result. Total Accuracy factors in such changes and errors and provides much comprehensive and practical determination of how a transmitter will perform under actual plant operation.

Battery Characteristic

Battery pack with long life lithium-thionyl chloride batteries. With the intrinsically safe type, the battery pack is replaceable in hazardous area.

Typical battery life is 10 years at 30 seconds update time or 5 years at 10 seconds update time in the following conditions.*

- Ambient temperature: 23±2°C
- Device role: IO mode
- LCD display: off

* Environmental condition such as vibration may affect the battery life.

Vibration Effects

Less than 0.1% of URL when tested per the requirements of IEC60770-1 field or pipeline with high vibration level (10-60 Hz, 0.21 mm displacement/60-2000 Hz 3 g)

Mounting Position Effects

EJX110B and EJX430B

Rotation in diaphragm plane has no effect. Tilting up to 90 degree will cause zero shift up to 0.4 kPa (1.6 inH₂O) which can be corrected by the zero adjustment.

EJX310B

Tilting up to 90 degree will cause zero shift up to 0.5 kPa (2.0 inH₂O) which can be corrected by the zero adjustment.

Response Time

Static Pressure Signal Range and Accuracy (EJX110B)

(Includes terminal-based linearity, hysteresis, and repeatability)

Range

Upper Range Value and Lower Range Value of the static pressure can be set in the range between 0 and Maximum Working Pressure (MWP). The upper range value must be greater than the lower range value. Minimum setting span is 0.5 MPa (73 psi). Measuring either the pressure of high pressure side or low pressure side is user-selectable.

Accuracy

Absolute Pressure

1 MPa or higher: ±0.2% of span

Less than 1 MPa: ±0.2%×(1 MPa/span) of span

Gauge Pressure Reference

Gauge pressure reference is 1013 hPa (1 atm)

Note : Gauge pressure variable is based on the above fixed reference and thus subject to be affected by the change of atmospheric pressure.

Minimum Pressure at Calibration* (EJX310B)

L capsule: 130 Pa abs (1 mmHg abs)
 M, A, and B capsules: 2.7 kPa abs (20 mmHg abs)
 * If one or two of the calibration points are smaller than the above value, the above pressure is used for testing.
 In case all of the calibration points are greater than the limit, only the pressure of upper range value (URV) is applied for testing.
 Specifying option code /S1 with M or A capsule will lower the limit to 130 Pa abs.
 /S1 is recommended for M capsule when the specified upper range value (URV) is not exceeding 3.4 kPa abs.

*1: ⚠ Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user's process fluids.

Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high-temperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.

- *1: Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user's process fluids.
Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high-temperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.
