

General Specifications

Model PH20, FU20 and FU24 analog 4 in 1 pH sensor

A family of the wide body sensor is available for application in a wide variety of processes. The sensors share the same valuable features:

- Long life saturated Ag/AgCl reference system.
- PTFE reference diaphragm to prevent fouling and reduce measurement error.
- Double junction combined with ion-trap to prolong the life of the reference probe, even in chemically unfavorable environments.
- Integral Pt1000 element for accurate temperature measurements.
- Platinum ORP/LE electrode for accurate simultaneous pH- and ORP measurements.
- Polymerized electrolyte to extend the sensors life time.
- Versatile in-line, immersion or off-line installation.

For general purpose applications: FU20

The FU20 combination sensor shows how Yokogawa applies the motto "Simply the Best" to sensor technology. The wide body sensors (26 mm diameter) hold four separate measuring elements in one unbreakable and chemical resistant PPS 40GF body. Installation is simple with the integrated industrial 3/4" tapered thread. Temperature fluctuations are compensated to extend the sensor life. The FU20 is targeted at those applications where simplicity will result in accurate and reliable pH- or redox measurements. This means that in 90% of the known applications, this sensor will be an excellent choice. In general purpose applications running at constant pressure and temperature the FU20 sensor has proven its use for years. In the standard configuration the wide body sensors hold four separate measuring elements in one unbreakable body made of PPS 40GF. This sensor offers a cost effective and rigid solution to the users. In strong acidic applications and in cases where the chemical compatibility of PPS does not address the process needs, the FTD version made in a PVDF body offers the required solution. The additional chemical compatibility offered by the PVDF version addresses the needs in several applications.

For more difficult applications: FU24

The FU24 is also made with a chemical resistant PPS 40GF body. It is particularly useful in harsh applications with fluctuating pressure and/or temperature. Process fluid may be moving in and out of the sensor under influence of frequent pressure and/or temperature fluctuations. This results in fast desalting and dilution of the reference electrolyte. This in turn will change the reference voltage and cause a drifting pH measurement.

By using the successful Yokogawa Bellow system integrated in the FU24 electrode, a strong pressure compensation mechanism is created. The build-in bellow ensures immediate interior pressure equalization to the outside pressure, making the sensor virtually insensitive to external pressure variations.

A slight overpressure caused by the bellow tension, prevents fluid ingress and maintains a positive ion flow out of the sensor. This feature is of particular interest in pure water applications.

Both FU20 and FU24 are available with VP connector. This makes installation a lot easier. All sensors are delivered with a Quality Certificate.

In addition to our analogue sensors Yokogawa delivers a platform consisting of so called SMART sensors in combination with the SENCOM SMART adapter SA11. In the SENCOM platform digital functionality allows:

- Perform off-line calibration reducing process impact.
- Enable easier asset management
- Enable easier statistical process control
- Easier monitoring of extreme conditions during use.

For additional information about SENCOM and its benefits request you to check the applicable GS-document number GS 12A06S01-01Z1. This document is available from our website and through our regional offices.

General Specifications FU20

Measuring elements	: pH glass electrode
	: Silver Chloride reference
	: Solid Platinum electrode
	: Pt1000 temperature sensor

Construction materials

Wetted parts

Sensor body	: NPT, FSM: PPS GF40: FTD : PVDF- (GF25+TZ24)
Earthing pin	: Solid Platinum
Measuring sensor	: G-glass
LE glass tube	: AR-glass
O-ring	: Viton-FTS and FSM,FTD and NPT
Reference junction	: Porous PTFE

Functional specifications (at 25°C)

Isothermal point	: pH 7
Reference system	: Ag/AgCl with saturated KCl
Glass impedance	
- Dome shape	: nominal 200MΩ
- Flat Surface	: nominal 700MΩ
Junction resistance	: 1 to 15 kΩ
Temperature element	: Pt1000 to IEC 751
Asymmetry potential	: 8 ± 15 mV
Linearity PH (Slope)	: > 96 % (of theoretical value)

Dynamic specifications (at 25°C)

Response time pH step (7 to 4)	: < 15 sec for 90%
Response time temp step (10°C)	
- Dome shape	: < 1 min for 90%
- Flat Surface	: < 4 min for 90%
Stabilization time (0.02 pH unit/10 s)	: < 2 minutes

Operating range

pH	: 0 to 14
ORP	: -1500 to 1500 mV
rH	: 0 to 100
Temperature	
- Dome shape	: -10°C to 105°C (14°F to 221°F)
- Flat surface	: 15°C to 105°C (59°F to 221°F)
Pressure	: 0 to 10 bar (0 to 142 PSIG)

Conductivity : > 50 μ S/cm

Note: The pH operating range at room temperature is 0-14pH, but at high temperatures the lifetime will be seriously shortened outside 2-12 pH range.

Note: For detailed information about SENCOM sensors refer to current edition of GS12B03J04.

General specifications FU24

Measuring elements	: pH glass electrode
	: Silver/Silver Chloride reference
	: Solid Platinum electrode
	: Pt1000 temperature sensor

Construction materials

Wetted materials:

Body	: PPS 40GF
Measuring Sensor	: G-Glass
Earth Pin	: Solid platinum
Reference Junction	: Porous PTFE
O-ring	: Viton

Functional specifications

Isothermal point	: pH 7
Glass impedance	
- Dome shape	: nominal 200 MΩ
- Flat Surface	: nominal 700 MΩ
Reference system	: Double junction, Ag/AgCl with saturated KCl, including Ag ⁺ ion trap
Junction resistance	: 1 to 15 kΩ
Temperature element	: Pt1000 to IEC 751
Asymmetry potential	: 8 ± 15 mV
Linearity PH (Slope)	: > 96 % (of theoretical value)

Note: The temperature sensor included in the FU24 is intended to provide indication and cell compensation. The construction has not been tested to the pressure vessel standards required for plant temperature control.

Dynamic specifications

Response time pH step (7 to 4)	: < 15 sec for 90%
Response time temp step (10°C)	
- Dome shape	: < 1 min for 90%
- Flat Surface	: < 4 min for 90%
Stabilization time (0.02 pH unit/10 s)	: < 2 minutes

Operating range

pH	: 0 to 14
Temperature	NPT : -10 - 105 °C (14 - 221 °F) FSM : 15 - 105 °C (59 - 212 °F)
Pressure	: 0 to 10 bar (0 to 145 PSIG)

Storage temp. : -15 to 50 °C (5 to 122 °F)

Note: The FU24 is suitable for pure water applications.

Note: Specifications should not be considered in isolation. For example the pH range can be 2-12pH, where the measurement is at elevated temperatures. For advice about specific applications please contact your local sales office.

Note: For detailed information about SENCOM sensors refer to current edition of GS12B03J04.

**General Specifications PH20
(to be discontinued)**

Measuring elements : pH glass electrode and Silver /Silver chloride reference system.
: Platinum electrode and Pt1000 temperature sensor.

Construction materials

Body : PVDF
Earthing pin : Solid platinum/glass
O-ring : Viton
Reference junction : Porous PTFE
Cable : Coaxial with 4 extra leads
Sheet material : Thermoplastic rubber
Measuring Sensor : G-Glass

Operating range

pH : 0 to 14
ORP : -1500 to 1500 mV
rH : 0 to 100
Temperature
- Dome shape : -10°C to 105°C (14°F to 105°F)

- Flat surface : 15°C to 105°C (59°F to 221°F)
Conductivity : > 50 µS/cm

Note: The pH operating range at room temperature is 0-14pH, but at high temperatures the lifetime will be seriously shortened outside 2-12 pH range.

Functional specifications (at 25°C)

Isothermal point : pH 7
Reference system : Ag/AgCl with saturated KCl
Glass impedance : 200 MΩ (nominal), G-glass
Junction resistance : 1 to 10 kΩ
Temperature element : PT1000 to IEC 751
Asymmetry potential : 8 ± 15 mV
Linearity PH (Slope) : > 96 % (of theoretical value)

Dynamic specifications (at 25°C)

Response time pH step (7 to 4) : < 15 sec for 90%
Response time temp. step (10°C) : < 1 min for 90 %
Stabilisation time (0.02 pH/10 s) : < 2 minute

Operating range

pH : 0 - 14*
Temperature : -10 to 105°C (14 to 221 °F)
Pressure : 0 to 10 bar (0 to 142 PSIG)
Conductivity : > 50 µS/cm
Storage temperature : -10 to 50°C (-22 to 122 °F)

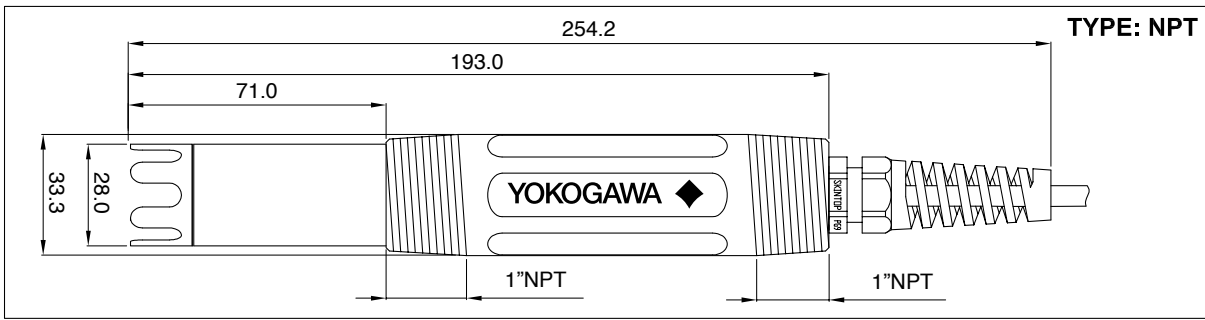

The erratic trend of the standard sensor shows the progressive contamination of its reference junction. The graph indicates between 0.1 to 0.4 pH error with the conventional sensor while the readings from the PH20 are extremely stable.

WU10-V-S-XX	Variopin cable

Cleaning system for FU20 & PH20

Some applications require frequent cleaning of the electrode. For these applications Yokogawa designed a chemical cleaning system that can either be used in the Yokogawa fitting range (HCN2, HCN3 or HCN4) or as back-end mounting option for the PH20 and FU20. The /HCNF option comes with a hastelloy cleaning nozzle, Stainless steel mounting and ferrules sets and a nylon tube of 10 meters.

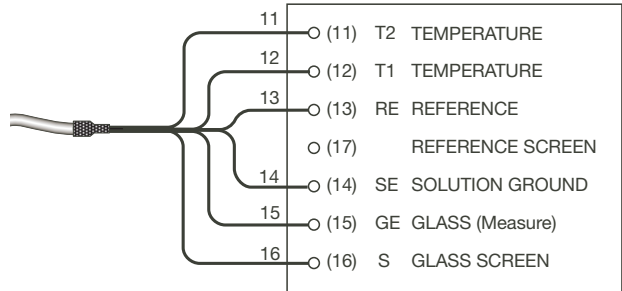

Option /HCNF

Wiring of the PH20 / FU20 / FU24

Conventional pH (& ORP) wiring

Connect the cable versions PH20, FU20 or FU24 to the EXA or EXAxt PH analyzer as shown. With this configuration, it is possible to measure ORP (or rH) at the same time (Refer to the EXA or EXAxt manual for appropriate impedance jumper and Service Code settings).

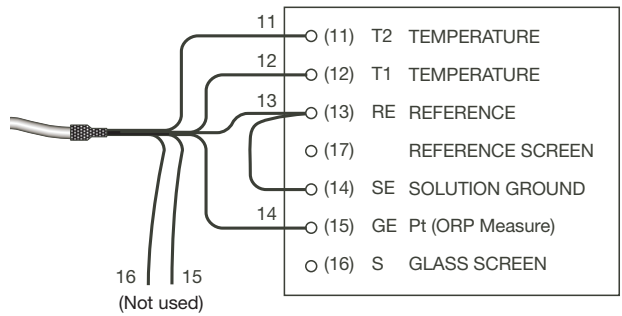

pH (& ORP) WIRING DIAGRAM

Wiring for ORP measurement with normal reference

Connect the PH20, FU20 or FU24 to the EXA PH analyzer as shown. Refer to the EXA manual for appropriate impedance jumper and Service Code settings.

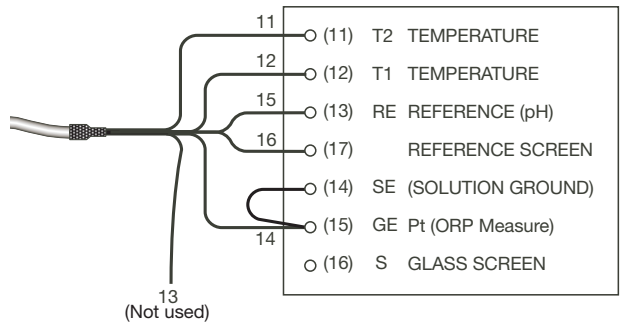

ORP WIRING DIAGRAM with normal reference

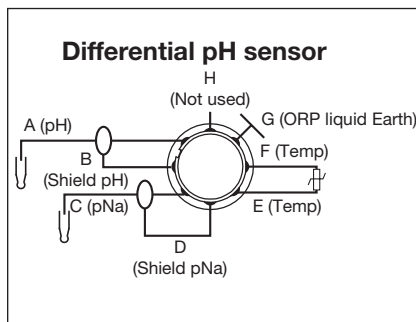

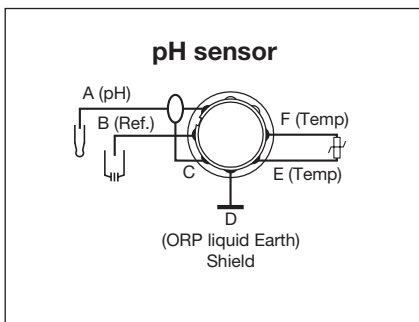

Wiring for ORP measurement with pH reference

Connect the PH20, FU20 or FU24 to the EXA Glass PH analyzer as shown. Refer to the EXA manual for appropriate impedance jumper and Service Code settings.

ORP WIRING DIAGRAM with pH sensor as reference
