○：表示该部件的所有均质材料中的有毒有害物质或元素的含量均低于 GB/T 26752 标准所规定的限量要求。

×：表示该部件中至少有一种均质材料中的有毒有害物质或元素的含量超过 GB/T 26752 标准所规定的限量要求。

本产品的部分部件包含 RoHS 指令中的限用物质，但是其使用方法不受该指令限制。

Some parts of this product include the restricted substances of RoHS Directive, but their applications are under the exemption of the directive.

この製品の一部には RoHS 指令の規制物質が含まれていますが、その使用方法は指令の適用除外となっています。

环保使用期限

该标志为环境保护使用期限，根据 SJ/T11364，适用于在中国（台湾、香港、澳门除外）销售的电子电气产品。

只要您遵守该产品相关的安全及使用注意事项，在自制造日起算的年限内，则不会因产品中有害物质泄漏或突发变异，而造成对环境的污染或对人体及财产产生恶劣影响

注）该年数为"环保使用期限"，并非产品的质量保证期。零件更换的推荐周期，请参照使用说明书

Introduction

Thank you for purchasing the Daqstation DX1000/DX1000N (DX).This manual describes the basic operating procedures and installation and wiring procedures of the DX1000/DX1000N. To ensure correct use, please read this manual and the manuals below thoroughly before beginning operation.
For the product specifications, see the general specifications.

DAQSTANDARD
Download the DAQSTANDARD (Application software) from the following URL.

Revisions

Safety Precautions

- This instrument conforms to IEC safety class I (provided with terminal for protective grounding), Overvoltage Category II or I[*1], Pollution Degree 2, and Measurement Category II (CAT II)[*2].

*1 Overvoltage Category II : Applied to standard power supply(100-240 VAC), I: Applied to /P1 option (24 VDC/AC)

*2 Measurement Category II (CAT II) applies to measuring circuits connected to low voltage installation, and electrical instruments supplied with power from fixed equipment such as electric switchboards.

- This instrument is an EN61326-1 (EMC standard) class A instrument (for use in commercial, industrial, or business environments). The influence rate (judgment condition A) in the immunity test environment is within ±10 % of the range or ±10 mV (50V range only, ±20 % of the range).

- When the voltage beyond the test voltage of the static electrostatic discharge (direct contact 4 KV and air gap 8 KV) prescribed by EN61326 was impressed on a front operating panel of this equipment, there is a fear that equipment breaks down.

- The general safety precautions described here must be observed during all phases of operation. If the DX is used in a manner not described in this manual, the DX safety features may be impaired. Yokogawa Electric Corporation assumes no liability for the customer's failure to comply with these requirements.

- The DX is designed for indoor use.

- **About This Manual**
  - Please pass this manual to the end user. We also ask you to store this manual in a safe place.
  - Read this manual thoroughly and have a clear understanding of the product before operation.
  - This manual explains the functions of the product. It does not guarantee that the product will suit a particular purpose of the user.

- **Precautions Related to the Protection, Safety, and Alteration of the Product**
  The following safety symbols are used on the product and in this manual.

  ⚠ **"Handle with care." To avoid injury and damage to the instrument, the operator must refer to the explanation in the manual.**

  ⏚ **Protective ground terminal**

  ⏛ **Functional ground terminal (do not use this terminal as a protective ground terminal.)**

  ∿ **Alternating current**

  ⎓ **Direct current**

  | **ON (power)**

  ○ **OFF (power)**

- For the protection and safe use of the product and the system in which this product is incorporated, be sure to follow the instructions and precautions on safety that are stated in this manual whenever you handle the product. Take special note that if you handle the product in a manner that violates these instructions, the protection functionality of the product may be damaged or impaired. In such cases, YOKOGAWA does not guarantee the quality, performance, function, and safety of product.

- When installing protection and/or safety circuits such as lightning protection devices and equipment for the product and control system or designing or installing separate protection and/or safety circuits for fool-proof design and fail-safe design of the processes and lines that use the product and the control system, the user should implement these using additional devices and equipment.

- If you are replacing parts or consumable items of the product, make sure to use parts specified by YOKOGAWA.

- This product is not designed or manufactured to be used in critical applications that directly affect or threaten human lives. Such applications include nuclear power equipment, devices using radioactivity, railway facilities, aviation equipment, air navigation facilities, aviation facilities, and medical equipment. If so used, it is the user's responsibility to include in the system additional equipment and devices that ensure personnel safety.

- Do not modify this product.

⚠ **WARNING**

- **Use the Correct Power Supply**
  Ensure that the source voltage matches the voltage of the power supply before turning ON the power. In the case of a desktop type, ensure that it is within the maximum rated voltage range of the provided power cord before connecting the power cord.

- **Use the Correct Power Cord and Plug (Desktop Type)**
  To prevent electric shock or fire, be sure to use the power cord supplied by YOKOGAWA. The main power plug must be plugged into an outlet with a protective earth terminal. Do not disable this protection by using an extension cord without protective earth grounding.
  The power cord is designed for use with this instrument. Do not use the power cord with other instruments.

- **Connect the Protective Grounding Terminal**
  Make sure to connect the protective grounding to prevent electric shock before turning ON the power.
  The power cord that comes with the desktop type is a three-prong type power cord. Connect the power cord to a properly grounded three-prong outlet.

- **Do Not Impair the Protective Grounding**
  Never cut off the internal or external protective grounding wire or disconnect the wiring of the protective grounding terminal. Doing so invalidates the protective functions of the instrument and poses a potential shock hazard.

- **Do Not Operate with Defective Protective Grounding**
  Do not operate the instrument if the protective grounding might be defective. Also, make sure to check them before operation.

- **Do Not Operate in an Explosive Atmosphere**
  Do not operate the instrument in the presence of flammable liquids or vapors. Operation in such an environment constitutes a safety hazard.
  Prolonged use in a highly dense corrosive gas (H2S, SOx, etc.) will cause a malfunction.

- **Do Not Remove Covers**
  The cover should be removed by YOKOGAWA's qualified personnel only. Opening the cover is dangerous, because some areas inside the instrument have high voltages.

- **Ground the Instrument before Making External Connections**
  Connect the protective grounding before connecting to the item under measurement or control unit.

- **Damage to the Protection**
  Operating the instrument in a manner not described in this manual may damage the instrument's protection.

⚠ **CAUTION**

This instrument is a Class A product. Operation of this instrument in a residential area may cause radio interference, in which case the user is required to take appropriate measures to correct the interference.

- **Exemption from Responsibility**
  - YOKOGAWA makes no warranties regarding the product except those stated in the WARRANTY that is provided separately.
  - YOKOGAWA assumes no liability to any party for any loss or damage, direct or indirect, caused by the user or any unpredictable defect of the product.
- **Handling Precautions of the Software**
  - YOKOGAWA makes no warranties regarding the software accompanying this product except those stated in the WARRANTY that is provided separately.
  - Use the software on a single PC.
  - You must purchase another copy of the software, if you are to use the software on another PC.
  - Copying the software for any purposes other than backup is strictly prohibited.
  - Please store the original media containing the software in a safe place.
  - Reverse engineering, such as decompiling of the software, is strictly prohibited.
  - No portion of the software supplied by YOKOGAWA may be transferred, exchanged, or sublet or leased for use by any third party without prior permission by YOKOGAWA.

Handling Precautions of the DX

- Use care when cleaning this instrument, especially its plastic parts. Use a soft dry cloth. Do not use organic solvents, such as benzene or thinner, or other cleansers. They may cause discoloring and deformation.
- Keep electrically charged objects away from the signal terminals. If you do, the DX may malfunction.
- Do not apply volatile chemicals to the display, panel keys, etc. Do not allow rubber and vinyl products to remain in contact with the DX for long periods of time. If you do, the DX may malfunction.
- When not in use, make sure to turn OFF the power switch.
- If there are any symptoms of trouble such as strange odors or smoke coming from the DX, immediately turn OFF the power switch and the power supply source. Then, contact your nearest YOKOGAWA dealer.

Handling Precautions of the External Storage Medium (CF Card)

- Use caution in the handling of the external storage medium as it is a delicate product.
- Write operation to storage media may fail under high-temperature or low-temperature environments. If you are using the DX in a low-temperature environment (around 10 °C or less), use the DX after the warm-up time (at least 30 minutes) has elapsed. If you are using the DX under a high-temperature environment (around 40 °C or more), it is recommended that the external storage medium be inserted into the drive when saving the data and be removed after the data storage operation is finished.
- Remove the storage medium from the drive when turning the DX ON/OFF.
- Touching the compact flash section when static electricity is built up on the human body can lead to erroneous operation.
- For the general handling precautions of the external storage medium, see the instruction manual that came with the external storage medium.

CAUTION

- Do not eject the external storage medium while the access indicator is illuminated. This can damage the data.
- Do not access the storage medium in a place with vibrations or shock. The storage medium or drive may malfunction.

Checking the Contents of the Package

Unpack the box and check the contents before operating the instrument. If some of the contents are not correct or missing or if there is physical damage, contact the dealer from which you purchased them.

DX

A name plate is located on the top panel of the DX (side panel on models with the /H5[ ] option). Check that the model name and suffix code given on the name plate match those on your order.
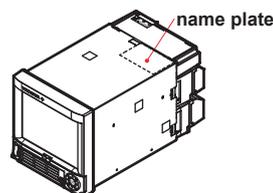

NO. (Instrument Number)

When contacting the dealer from which you purchased the instrument, please give them the instrument number.

MODEL and SUFFIX Cod

Model code	Suffix code	Optional code	Description
DX1002			Daqstation DX1000 2ch, 125ms (25ms[*10])
DX1004			Daqstation DX1000 4ch, 125ms (25ms[*10])
DX1006			Daqstation DX1000 6ch, 1s (125ms[*10])
DX1012			Daqstation DX1000 12ch, 1s (125ms[*10])
DX1002N[*9]			Daqstation DX1000N 2ch, 125ms (25ms[*10])
DX1004N[*9]			Daqstation DX1000N 4ch, 125ms (25ms[*10])

4	CF card	B8706NQ	1	128 MB (The size and model may change.)
5	Power cord	A1006WD	1	Supplied only for models with the /H5D option. Maximum rated voltage: 125 V
		A1009WD	1	Supplied only for models with the /H5F option. Maximum rated voltage: 250 V
		A1024WD	1	Supplied only for models with the /H5R option. Maximum rated voltage: 250 V
		A1054WD	1	Supplied only for models with the /H5J option. Maximum rated voltage: 250 V
		A1064WD	1	Supplied only for models with the /H5H option. Maximum rated voltage: 250 V

Optional Accessories (Sold Separately)

The following optional accessories are available for purchase separately. If you make an order, make sure that all contents are present and undamaged. For information about ordering accessories, contact the dealer from which you purchased the DX.

No.	Name	Model	Minimum Q'ty	Notes
1	CF card	772093	1	512 MB
		772094	1	1 GB
		772095	1	2 GB
2	Shunt resistor (for screw input terminal)	415920	1	250 Ω ± 0.1%
		415921	1	100 Ω ± 0.1%
		415922	1	10 Ω ± 0.1%
3	Shunt resistor (for clamped input terminal)	438920	1	250 Ω ± 0.1%
		438921	1	100 Ω ± 0.1%
		438922	1	10 Ω ± 0.1%
4	Mounting brackets	B9900BX	2	–
5	Door lock key	B8706FX	1	–
6	Remote control terminal	438227	1	Remote controller.
7	Validation document	–	1	Electronic file

Style number, release number, and firmware version number of the DX

Style number: This is the DX hardware number that is indicated on the name plate.

Release number: This is the DX firmware number that is indicated on the name plate. The number corresponds to the integer part of the firmware version number.

Example: If the firmware version number is 2.01, the release number is 2.

Firmware version number: This number is displayed on the DX system information screen. For the procedure, see section 2.5, "Viewing the DX Information" in the *DX1000/DX1000N User's Manual (IM 04L41B01-01E)*.

Protection of Environment

Control of Pollution Caused by the Product

For details, see the *Control of Pollution Caused by the Product* (IM04L41B01-91C).

Proper Disposal of This Product

This is an explanation of how to dispose of this product based on Waste Electrical and Electronic Equipment (WEEE), Directive. This directive is only valid in the EU.

- Marking
  This product complies with the WEEE Directive marking requirement. This marking indicates that you must not discard this electrical/electronic product in domestic household waste.

- Product Category
  With reference to the equipment types in the WEEE directive, this product is classified as a "Small equipment" product.
  Do not dispose in domestic household waste.
  When disposing products in the EU, contact your local Yokogawa Europe B.V. office.

How to Replace and/or Dispose the Batteries

This is an explanation about the new EU Battery Directive (DIRECTIVE 2006/66/EC). This directive is only valid in the EU.

Batteries are included in this product. Batteries incorporated into this product cannot be removed by yourself. Dispose them together with this product. When you dispose this product in the EU, contact your local Yokogawa Europe B.V.office. Do not dispose them as domestic household waste.
Battery type: Lithium battery

Notice: The symbol (see above) means they shall be sorted out and collected as ordained in ANNEX II in DIRECTIVE 2006/66/EC.

Conventions Used in This Manual

- This manual covers information regarding DX1000/DX1000Ns that have a suffix code for language "-2" (English).
- For details on how to set the language, see section 2.6, "Changing the Language" in the *DX1000/DX1000N User's Manual (IM 04L41B01-01E)*.

Unit

K: Denotes 1024. Example: 768 KB (file size)
k: Denotes 1000.
The following markings are used in this manual.

Improper handling or use can lead to injury to the user or damage to the instrument. This symbol appears on the instrument to indicate that the user must refer to the user's manual for special instructions. The same symbol appears in the corresponding place in the user's manual to identify those instructions. In the manual, the symbol is used in conjunction with the word "WARNING" or "CAUTION."

WARNING

Calls attention to actions or conditions that could cause serious or fatal injury to the user, and precautions that can be taken to prevent such occurrences.

CAUTION

Calls attentions to actions or conditions that could cause light injury to the user or damage to the instrument or user's data, and precautions that can be taken to prevent such occurrences.

Note

Calls attention to information that is important for proper operation of the instrument.

▶

Indicates after this mark reference to related procedure or explanation.

Bold characters

Indicates character strings that appear on the screen and the operation keys.

Revision History

The contents of this manual corresponds to the DX1000 with release number 4 and style number 5, and the DX1000N with release number 4 and style number 5. For details on the functions that have been added or changed, see "DX's Version and Functions Described in This Manual" in the *DX1000/DX1000N User's Manual (IM04L41B01-01E)*.

Edition	DX	Description
2	Version 1.11	Additions and improvements to functionality.
	Version 1.21	
3	Release number 2 (Version 2.0x)	Additions and improvements to functionality.
	Style number 2	NEMA4 compliance.
4	Same as edition 3	Additions and improvements to functionality.
		Changed the direction of the clamp input terminal (/H2 option).
5	Release number 3 (Version 3.0x)	Additions and improvements to functionality.
	Style number 3	Changed the boot ROM.
6	Release number 4 (version 4.0x)	Additions and improvements to functionality. Internal memory suffix code -3 has been added, and -1 and -2 have been removed.
	Style number 3	
7	Same as edition 6	Additions and improvements to explanations.
8	Release number 4 (version 4.0x)	Additions and improvements to explanations. NLF is supported. User's manuals are supplied by downloading them on the web site.
	Style number DX1000: 4 DX1000N: 3	DX1000: A 5.7-inch LCD with LED back light replaced a 5.5-inch LCD with CFL back light.
9	Same as edition 8	Merge the manuals (IM 04L41B01-91C, IM 04L41B01-81Z1).
10	Same as edition 9	Changes of "Proper Disposal of This Product"
11	Same as edition 10	Delete the CF card adapter. Changed the battery assembly part number.
12	Release number 4 (version 4.2x) Style number DX1000: 5 DX1000N: 5	Changed the style (H). Changed the EtherNet/IP name.
13	Same as edition 12	Corrections (delete the tolerance of external dimensions).

Introduction to Functions

Measured Items

You can connect DC voltage, thermocouple, RTD, and ON/OFF input and measure various values such as temperature and flow rate. The DX samples the input signals at the scan interval to obtain the measured values. The fastest scan interval is 25 ms on the DX1002, DX1002N, DX1004, and DX1004N and 125 ms on the DX1006, DX1006N, DX1012, and DX1012N.
Up to four alarm conditions can be set for each measurement channel.

Data Storage Function

There are two methods of recording measured data. One is to record the measured data continuously, and the other is to record only when certain events occur such as alarms. The measured data is recorded to the internal memory at a specified interval. The data in the internal memory can be stored to a CF card automatically or manually. By connecting to a network via the Ethernet interface, the measured data can also be automatically transferred to an FTP server on a network.

Automatic data transfer to an FTP server

DX   FTP server   **Ethernet**

Internal memory

CF card

Measurement input
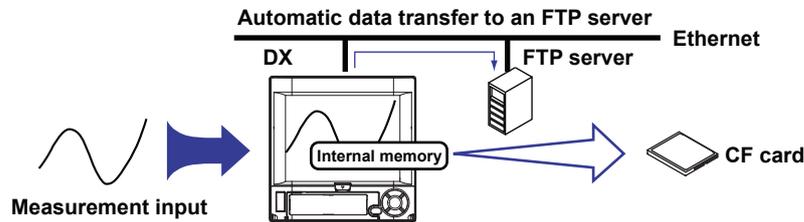

Display Function

Measured data can be displayed as trends, numeric values, and bar graphs for each group. In addition, the overview display can be used to display and monitor all channels on a single screen.

Trend display	Numeric (digital) display	Bar graph display	Overview display
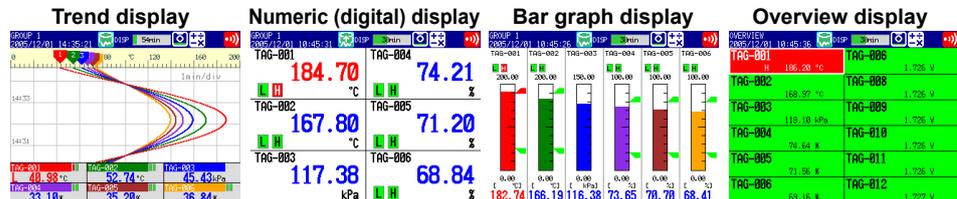

Other Functions

Computation Function (option)	Various types of computation can be performed by assigning equations to computation channels.
FAIL/status output function (option)	Outputs an alarm when the DX fails. The function also monitors the DX status such as the remaining amount of internal memory and outputs alarms.
Remote control function (option)	A specified action is executed when a remote input signal is applied to the terminal on the rear panel.
Security function	Enables only registered users can operate the DX. The function can also be used to prohibit key operation.
Communication function	The Ethernet interface can be used to monitor the DX using a Web browser and transmit e-mail when an event occurs such as an alarm. In addition, data of devices on the network can be loaded and displayed using the Modbus protocol.

DAQSTANDARD

The software program, DAQSTANDARD, can be used to display the measured data, convert the measured data format, and create DX setup data.

DX System Configuration

The DX can be used to configure a system as shown below.

Terminology

- **Memory sample**

  The operation of recording measured data.

- **Memory start**

  The operation of starting memory sampling.

- **Memory stop**

  The operation of stopping memory sampling.

- **Display data**

  The waveform data shown on the DX display. The data recorded at the sampling interval for the displayed data.

- **Event data**

  Measured data recorded at a sampling interval separate from that of the display data.

Names of Parts

Front View

Key panel opened

LCD
Display various operation displays such as the trend display as well as setup displays.

Front cover (key panel)
Open the front cover by pulling the cover while holding down the tab at the center of the upper section of the cover.

Power indicator
Illuminates in red when the power is turned ON. Illuminates in green while memory sampling is in progress.

Remote control sensor (/KB1 and /KB2 options)
Receives infrared light from the remote control terminal.

Label (front of the key panel cover)
Write arbitrary labels for your convenience.

Key panel cover
Open the cover by pinching the left tab and pulling forward.

CAUTION

When closing the front cover, press the front cover in until the tab at the center of the upper section of the cover is all the way up. If the front cover is not closed completely, the water and dust proof capability may be impaired.

Front cover opened

USB port
A USB port conforming to Rev. 1.1.

CF card slot

Power switch
Not available on the DX1002N, DX1004N, DX1006N, and DX1012N.

CF card access indicator

CF card eject button
Used when ejecting the CF card.

Door lock key (included)
Insert the pin in the left hole to lock.
Insert the pin in the right hole to unlock.

Lock key

Rear Panel

USB port (/USB1 option)
A USB Rev. 1.1 compliant port.

Ethernet port
A 10Base-T port.

**Serial port
(/C3 option)**
RS-422/485 port.

Power supply terminals

**PROFIBUS-DP port
(/CP1 option)**
PROFIBUS connector.

**Serial port
(/C2 option)**
RS-232 port.

**Optional terminals (/A[ ], /F1, /R1,
/TPS[ ], and /PM1 options)**
Used to connect optional
input/output signal wires.

**Input terminals (screw
terminals or clamped
terminals; /H2 option)**
Used to connect input signal.

Desktop Type (/H5[ ] Option)

Handle

Feet and Stand

DX1000/DX1000N Workflow

When using the DX for the first time, carry out the following procedure.

Installation
Install the DX.
▶ Page 49 and subsequent pages

Wiring
Connect input/output wires to the terminals and connectors on the rear panel, and connect the power cord.
▶ Page 52 and subsequent pages

Power ON
Turn the power ON. (DX1002, DX1004, DX1006, and DX1012 Only)
▶ Page 13

Environmental Settings
Set the date/time, load the CF card, and so on.
▶ Page 18 and 24

Functional Settings
Set measurement functions.
▶ Page 19 and subsequent page, page 28 and subsequent pages

Measurement
Start the measurement. Perform operations such as switching the screen and writing messages. Save the measured data.
▶ Page 39 and subsequent pages

Data Management
Check and manage the measured data.
Use the software program, DAQSTANDARD, to display the measured data and convert the measured data to Excel, Lotus, and ASCII formats.
▶ Page 48
▶ *DAQSTANDARD Viewer User's manual (IM 04L41B01-63EN)*

On a DX with advanced security (/AS1 option; release number 4 or later), carry out the following procedure after turning the DX on.

CF Card Insertion
Insert a CF card into the DX.
▶ Page 24

User Registration
Register the users who will operate the DX.
▶ *Advanced Security Function (/AS1 option) User's Manual (IM04L41B01-05EN)*

Environmental Settings
Set the date/time.
▶ Page 18

Functional Settings
Set measurement functions.

Measurement
Start the measurement. Perform operations such as switching the screen and writing messages. Save the measured data.
▶ Page 39 and subsequent pages

Data Management
Check the measured data, and attach approval information to the measured data file.
▶ *Advanced Security Function (/AS1 option) User's Manual (IM04L41B01-05EN)*
You can also attach approval information to the measured data file by using the software program, DAQSTANDARD.
▶ *DAQSTANDARD Viewer User's Manual (IM 04L41B01-63EN)*

Turning the Power ON/OFF (DX1002, DX1004, DX1006, and DX1012 Only)

Turning the Power ON

⚠️

CAUTION

Before turning ON the power switch, check that
- The power cord/wires are connected correctly to the DX.
- The DX is connected to the correct power supply (see page 60).

If the input wires are connected in parallel with other devices, do not turn ON/OFF the power switch of the DX or another device during operation. This can have adverse effects on the measured values.

1. Open the operation cover.
2. Turn ON the power switch.
   After performing a self-test for a few seconds, the operation screen appears.

3. Close the operation cover.

⚠️

CAUTION

- If nothing is displayed when the power switch is turned ON, turn OFF the power switch and check the points listed above one more time. After checking the points, turn ON the power switch again. If the DX still does not work, it is probably a malfunction. Contact your nearest YOKOGAWA dealer for repairs.
- If an error message is displayed on the screen, take measures according to the description in chapter 10, "Troubleshooting" in the *DX1000/DX1000N User's Manual*.
- Turn ON the power switch, let the DX warm up for at least 30 minutes, and then start the measurements.
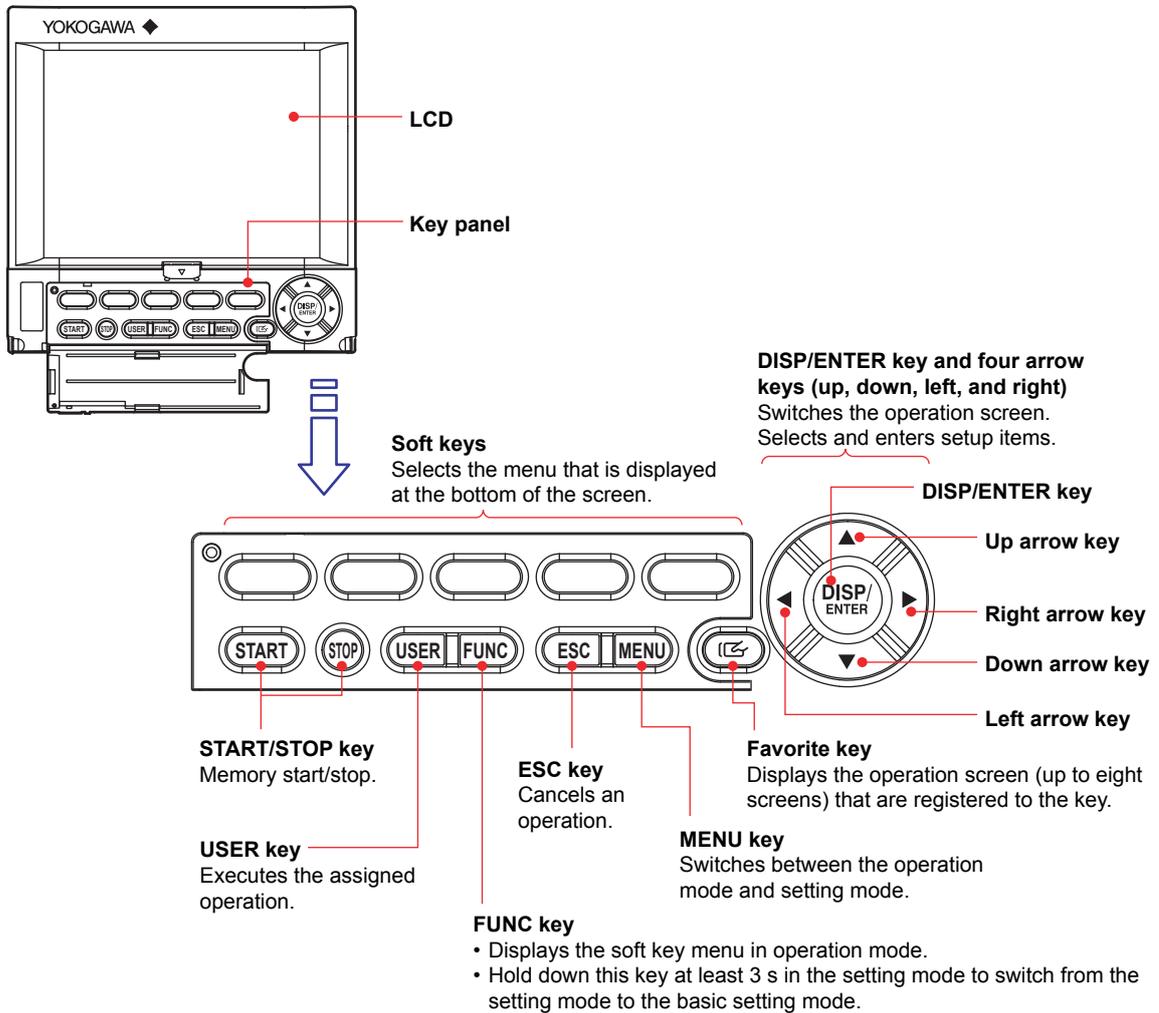

Turning the Power OFF

⚠️

CAUTION

Before turning OFF the power switch, check that the external storage medium is not being accessed.

1. Open the operation cover.
2. Turn OFF the power switch.
3. Close the operation cover.

Basic Operation

Panel Keys

LCD

Key panel

Soft keys
Selects the menu that is displayed at the bottom of the screen.

DISP/ENTER key and four arrow keys (up, down, left, and right)
Switches the operation screen. Selects and enters setup items.

DISP/ENTER key

Up arrow key

Right arrow key

Down arrow key

Left arrow key

START/STOP key
Memory start/stop.

ESC key
Cancels an operation.

Favorite key
Displays the operation screen (up to eight screens) that are registered to the key.

USER key
Executes the assigned operation.

MENU key
Switches between the operation mode and setting mode.

FUNC key
• Displays the soft key menu in operation mode.
• Hold down this key at least 3 s in the setting mode to switch from the setting mode to the basic setting mode.

Display

Scale

Waveform display

Numeric display

Status display section
Shows the display name, date/time, data recording, alarm icon, etc.

Data display section
Shows the measured data and the functional setup.
For displaying the scale, see section 5.7, in the *DX1000/DX1000N User's Manual (IM 04L41B01-01E)*.
For displaying the waveform and numeric dispay, see section 4.2, in the *DX1000/DX1000N User's Manual (IM 04L41B01-01E)*.

Display on the Status Display Section

The following information is displayed in the status display section.

Memory sampling status

Memory sampling stopped

Memory sampling in progress

Memory sampling icon

Data type
DISP: Display data
EVENT: Event data

Memory sampling progress
Displays the progress using a green bar graph. The frame indicates the file save interval (display data) or the data length (event data).

Error in internal memory.
Contact your nearest YOKOGAWA dealer for repairs.
Displays the remaining memory sampling time for the left bar graph.

GROUP 1   ALL
2005/12/01 14:21:30 DISP 50min

Display name or group name
For all channel display on the trend display, "All" is displayed.

Date and time
Displayed in yellow while the time is being corrected.

When using the batch function
AAA-1234-000541
2005/12/01 14:21:26

Batch name and the display name are shown alternately.
Date and time

If the "batch number-lot number" exceeds 20 characters, the "date and time" position is used to display the "batch number-lot number."

When using the login function
Admin1
2005/12/01 14:24:01

Name of the user logged in
Date and time and the display name are shown alternately.

When using the login and batch functions
Admin1
AAA-1234-000542

Name of the user logged in
Batch name, the display name, and date and time are shown alternately.

The green level display indicates the amount of CF card used. If Media FIFO* is not enabled and the free space on the CF card falls below 10%, the level indicator changes to red.
* See section 1.4, in the *DX1000/DX1000N User's Manual*. Media FIFO is a function available on release number 2 or later.

Alarm icon
Displayed when any alarm is activated. Blinks when there are alarms that are occurring but have not been acknowledged.
(Red)

All alarms have been released after they have occurred, but there are alarms that have not been acknowledged.
(Green)

status icon
The status assigned to the status output (/F1 option) is occurring.

User Locked Icon (/AS1 option)
Displayed when the user is locked.

Keys are locked.

E-mail transmission is enabled.

Computation icon (/M1 or /PM1 option)
White icon: Computation started.

Yellow icon: Computation data dropout occurred.

CF card icon
CF card is being accessed.

Waiting.

Light blue icon: CF card in the slot is not recognized. Remove and reset it.

CF card error.
Carry out the procedure below to reset the CF card icon to normal.
• Remove the CF card, and then reinsert it.
• Replace the CF card with a normal one.
• Format the CF card on the DX (the data on the CF card will be erased).

Setup display

Setup display
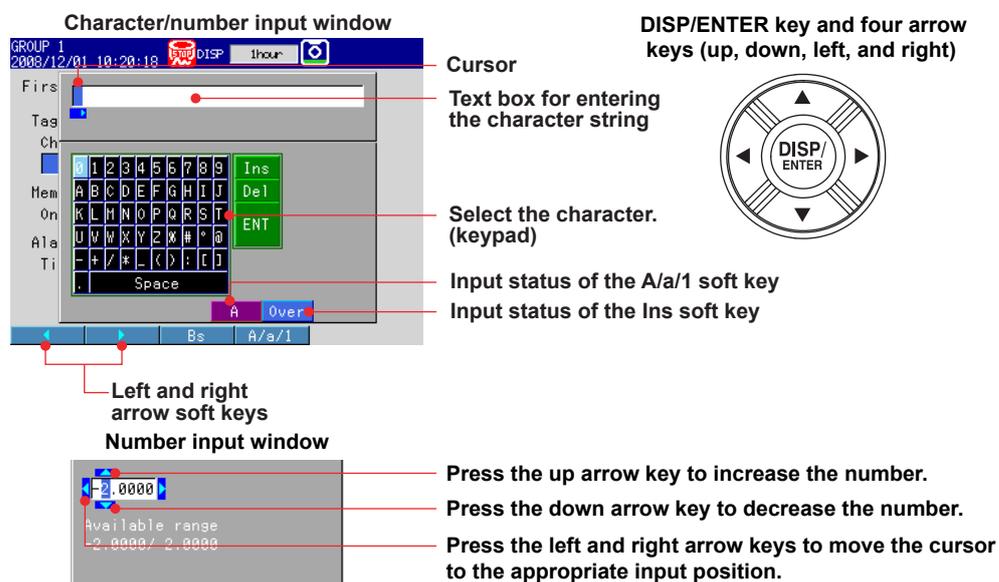

The DX has three modes.

Mode	Description
Operation mode	A mode for performing measurements.
Setting mode	A mode in which input range, measurement method, and so on are configured. Settings can be changed when memory sampling is in progress excluding some items.
Basic setting mode	A mode used to set basic items such as the scan interval and storage format of measured data. On a DX with advanced security (/AS1 option; release number 4 or later), the login settings can be changed during memory sampling.

* For further details on the basic setting mode and setting mode, see page 63.

Carry out the steps given in the following pages. It will help you to understand the DX operation.

Entering Values and Characters

The character/number input window and DISP/ENTER key are used to set the date/time, set the display span of the input range, set the tag, set the message string, enter the password, etc.

Character/number input window

DISP/ENTER key and four arrow keys (up, down, left, and right)

Cursor

Text box for entering the character string

Select the character. (keypad)

Input status of the A/a/1 soft key

Input status of the Ins soft key

Left and right arrow soft keys

Number input window

Press the up arrow key to increase the number.

Press the down arrow key to decrease the number.

Press the left and right arrow keys to move the cursor to the appropriate input position.

Entering Character Strings

When a window for entering a character string appears, enter it by performing the following key operation.

- **Left and right arrow soft keys:** Moves the cursor in the text box to select the input position.
- **Keypad:** Use the **four arrow keys (up, down, left, and right)** to move the cursor on the keypad to select the desired character.
  - **Ins:** Switches between insert and overwrite.
  - **Del:** Deletes the character at the cursor position in the text box.
  - **ENT:** Enters the character string in the text box.
- **DISP/ENTER key:** Enter the character that you selected with the keypad in the text box or execute **Ins**, **Del**, or **ENT**.
- **Bs soft key:** Backspace. Deletes the character before the cursor.
- **A/a/1 soft key:** Selects uppercase alphabet (A), lowercase alphabet (a), or value (1). The character type that you can enter changes each time you press the **A/a/1 soft key**. The selected character type is displayed at the bottom section of the character/number input window.

The contents of the screens in the operation examples below may change depending on which options are installed and how the settings are configured.

On a DX with advanced security (/AS1 option; release number 4 or later) you must first insert the CF card into the slot (see page 24).
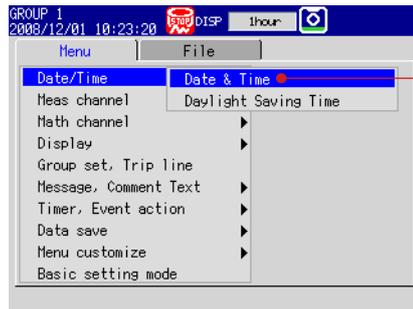

Changing the Date/Time

In this example, we will change the date from the 1st to the 6th. After carrying out this step, reset the time to the correct date/time.

1. Display the operation mode screen.
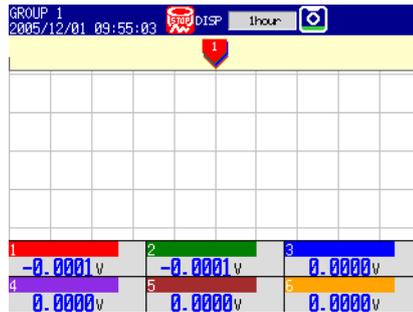

2. Press **MENU** once to display the setting menu.

3. Press the **down arrow key** once.
   The cursor moves to **Date/Time**.

4. Press the **right arrow key** once.

   Select Date & Time.

5. Press **DISP/ENTER** once to open the Time set window.

6. Change the date from 01 to 06.

 | | |
   |---|---|
   | Select the input position: | Press the **right arrow key** five times to move the cursor in the text box. |
   | Enter the value: | Press the **up or down arrow key** several times to display 6. |
   | Enter the input: | Press **DISP/ENTER** once. |
   | Cancel the setting: | Press **ESC** before pressing **DISP/ENTER** (entering the input). |

   Display the Time set window.
   (Display after entering **6**)
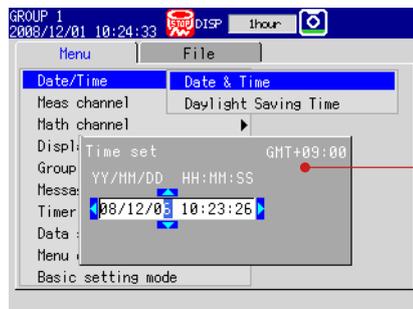

7. Press **ESC** twice or **MENU** once to return to the operation mode screen.

   On a DX with advanced security (/AS1 option; release number 4 or later):

   Press **ESC** twice or **MENU** once to display a confirmation screen. To return to the operation mode screen, select **Yes**, and press **DISP/ENTER** once.

   Operation complete.

Operation Example in the Setting Mode: Changing the Input Range
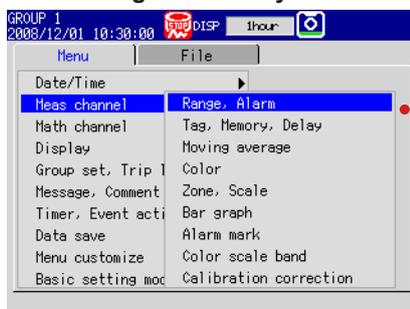

Set the input range of channel 2 to thermocouple type T and 0.0 to 400.0°C.

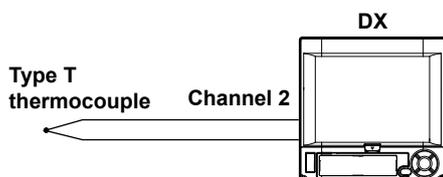

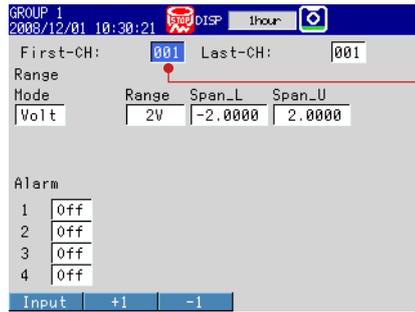

1. Display the operation mode screen.
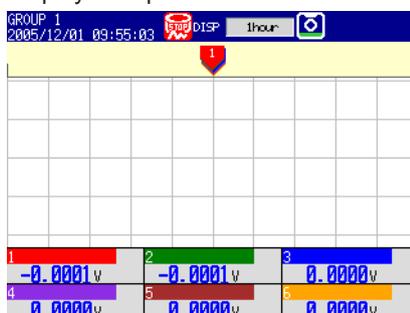

2. Press **MENU** once to display the setting menu.

3. Press the **down arrow key** twice to select **Meas channel**.

4. Press the **right arrow key** once.

Select the Range, Alarm.

5. Press **DISP/ENTER** once.

Select First-CH.

6. Press the **+1** soft key once to set **First-CH** and **Last-CH** to 2.

7. Press the **down arrow key** once to move the cursor to **Mode**.

8. Press the **TC** soft key once. The cursor moves to **Range**, and the changed item is displayed in yellow.
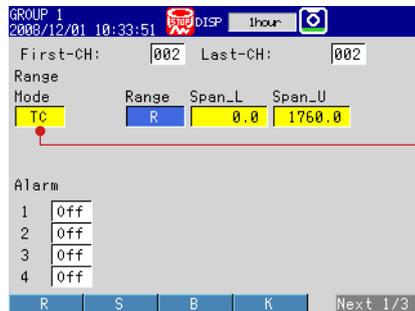

Select TC.

9. Press the **Next** soft key.

10. Press the **T** soft key once. The cursor moves to **Span_L**.

11. Press the **Input** soft key once.
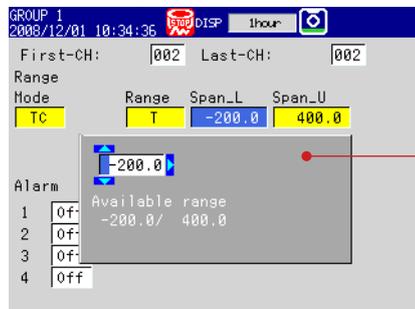

Display the Span_L setting window.

12. Enter 0.0 in the Span Lower box.

Select the input position:	Press the **right arrow key** once to move the cursor in the text box to the right.
Delete the minus sign:	Press the **up arrow key** once to delete the minus sign.
Delete the 2 and 0 in the same way.	
Enter the input:	Press **DISP/ENTER** once. **Span_L** is set, and the cursor moves to **Span_U**.
Cancel the setting:	Press **ESC** before pressing **DISP/ENTER** (entering the input).

13. Enter 400.0 in the Span Upper box.

See step 12 for the procedure.

14. Press **DISP/ENTER** once. The changed items are entered, and the cursor returns to **First-CH**. The changed items change from yellow to white.
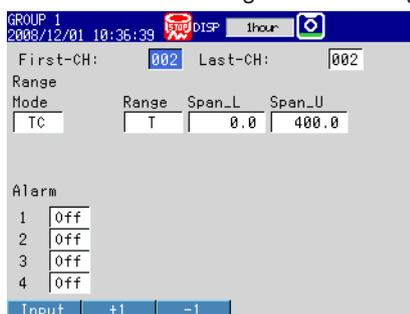

15. Press **ESC** three times or **MENU** twice to return to the operation mode screen.

On a DX with advanced security (/AS1 option; release number 4 or later):

Press **ESC** three times or **MENU** twice to display a confirmation screen. To return to the operation mode screen, select **Yes**, and press **DISP/ENTER** once.

Operation complete.

Operation Example in the Basic Setting Mode: Changing the Scan Interval

In this example, we will change the scan interval. Here, the scan interval on the DX1012 is changed to 2 s. The selectable scan intervals are different on the model, but the procedure is the same.

Measures every 2 s   **DX**

Type T thermocouple   **Channel 2**
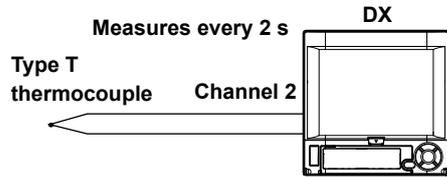

1. Display the operation mode screen.
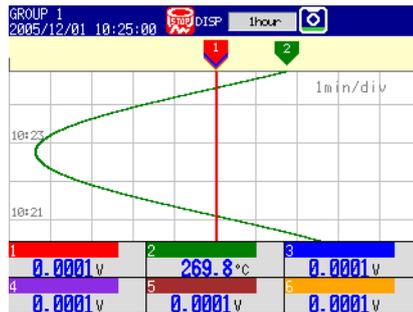

2. Press **MENU** once to display the setting menu.
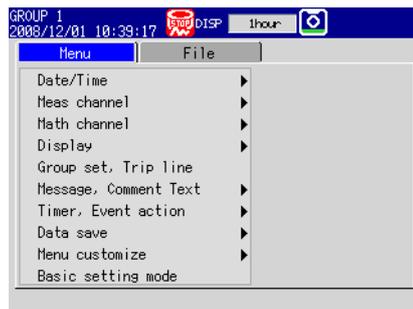

3. Hold down **FUNC** for at least 3 s.

   Alternatively, you can execute the following procedure to switch to Basic Setting mode.

   Use the **up or down arrow key** to select **Basic setting mode** on the **Menu** tab, and press **DISP/ENTER**.

   A confirmation window will appear. Select **Yes**, and press **DISP/ENTER**.

   Display the Basic Setting Mode menu.
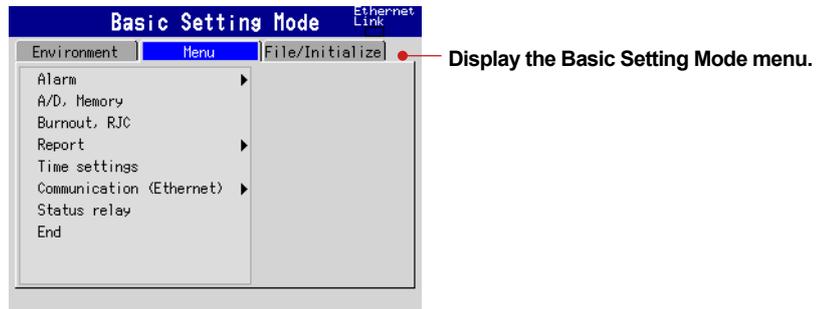

4. Press the **down arrow key** twice to select **A/D, Memory**.

5. Press **DISP/ENTER** once.
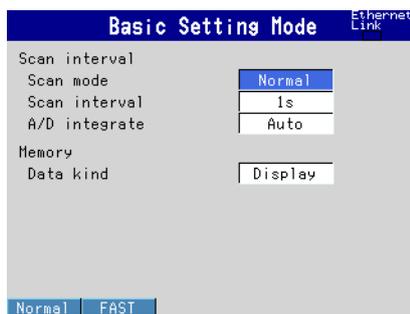

6. Press the **down arrow key** once to move the cursor to **Scan interval**.

7. Press the **2s** soft key once. The cursor moves to **A/D integrate**, and the changed item is displayed in yellow.
Cancel the setting: Press **ESC** before pressing **DISP/ENTER**.

8. Press **DISP/ENTER** once. The changed items are entered, and the cursor returns to **Scan mode**.

Set the scan interval to 2 s.
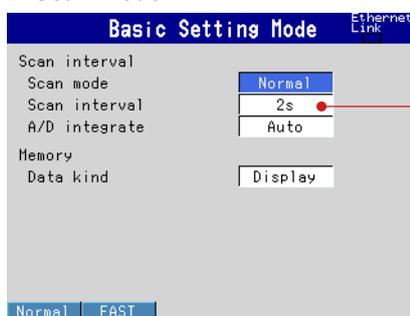

9. Press **ESC** once to return to the basic setting mode menu.

10. Press **ESC** once more.
Alternatively, use the **up or down arrow key** to select **End**, and press **DISP/ENTER**.

Display the confirmation window.

11. Press **DISP/ENTER** once. The settings are saved, and the DX returns to the operation mode screen.

Discard the changes: Select **No** and press **DISP/ENTER**.
Do not end the basic setting mode: Select **Cancel** and press **DISP/ENTER**.

Operation complete.

Inserting/Removing a CF Card

Inserting a CF Card

1. Open the operation cover.
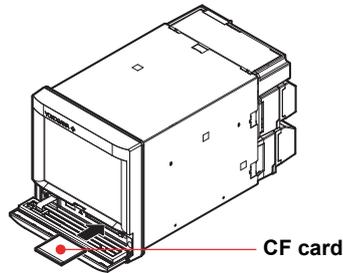

⚠

CF card

With the label "This side up" facing up
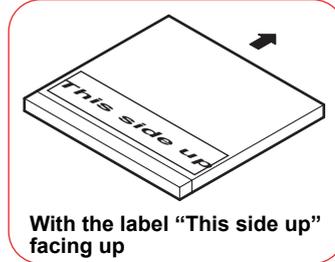

2. Insert the CF card into the slot.
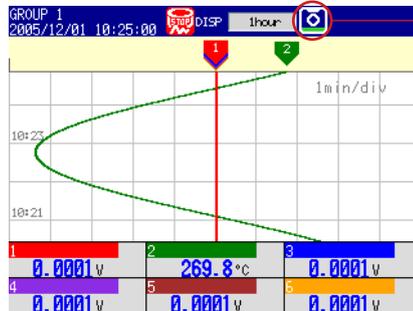

Displays the CF card icon
If the DX does not recognize the CF card, try reinserting it.

3. Close the operation cover.

Operation complete.

Removing a CF Card
<Operations in the Operation Mode>

1. Press **FUNC** once.

2. Press the **Media eject** soft key once.
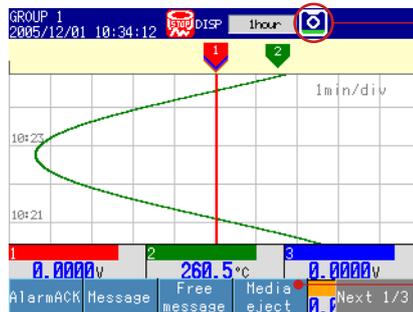

CF card icon

Media eject

3. Press the **CF** soft key once. The message "Media can be removed safely" appears. Displays the CF card icon in blue.

4. Open the operation cover.

5. Press the CF card eject button. When you eject the CF card, the CF card icon disappears.
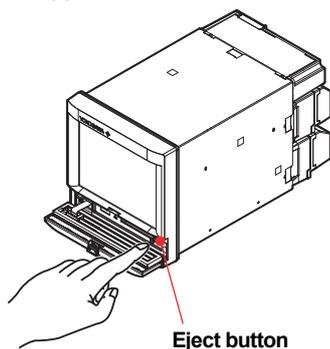

Eject button

Press the eject button in until it clicks.
The eject button stops at depressed position.
Pinch the left and right sides of the CF card and remove it.
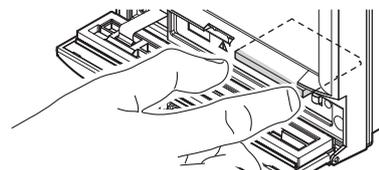

6. Close the operation cover.

Operation complete.

<Operation in the Basic Setting Mode>

1. Press **MENU** (to switch to setting mode), hold down **FUNC** for 3 s (to switch to basic setting mode), select the **File/Initialize** tab > **Media eject** > **CF** *, and press **DISP/ENTER**.

* Select **CF** if you have a choice between **CF** and **USB**.
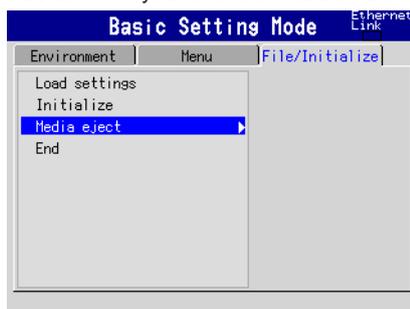

The message "Media can be removed safely" appears.

2. Open the operation cover.

3. Press the CF card eject button. Remove the CF card.

4. Close the operation cover.

Operation complete.

Note

If you remove the CF card without carrying out the media eject procedure, the message "Media was removed compulsorily" appears. Remove the CF card by carrying out the procedure above to prevent damaging the data that is stored.

Saving the Setup Data

In this example, we will save the setup data to a file named "SF2" on the CF card.

1. Display the operation mode screen.
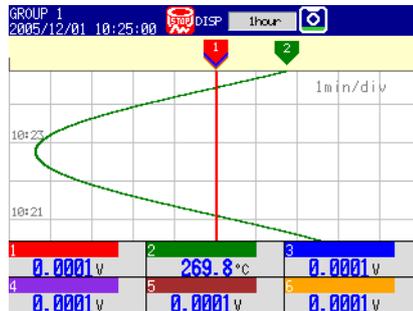

2. Press **MENU** once to display the setting menu.

3. Press the **right arrow key** once to select the **File** tab.

4. Press the **down arrow key** four times.

Select Save settings.
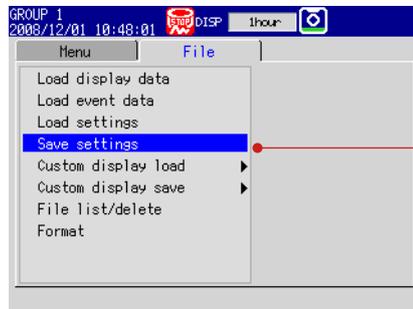

5. Press **DISP/ENTER** once.

6. Press the **Input** soft key once.

7. Enter "SF2" for the file name.
   For the input procedure, see "Entering Values and Characters" on page 17.
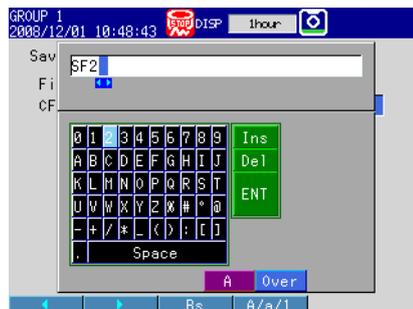

8. Press **DISP/ENTER** once. The message "Data are being saved to media" appears, and the setup data is saved.

9. Press **ESC** or **MENU** twice to return to the operation mode screen.

   On a DX with advanced security (/AS1 option; release number 4 or later):

   Press **ESC** or **MENU** twice to display a confirmation screen. To return to the operation mode screen, select **Yes**, and press **DISP/ENTER** once.

   Operation complete.

Loading the Setup Data

In this example, we will load the setup data "SF2" from the CF card and update the DX settings.

This procedure only loads the setup data that the DX uses for setting mode.To load the setup data for both setting mode and basic setting mode, press **MENU**, hold down **FUNC** for 3 s, select the **File/Initialize** tab > **Load settings**, and press **DISP/ENTER**.

1. Display the operation mode screen.
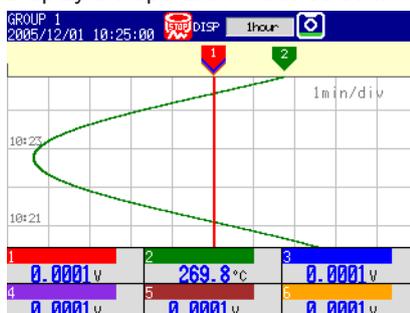

2. Press **MENU** once to display the setting menu.

3. Press the **right arrow key** once to select the **File** tab.

4. Press the **down arrow key** three times.
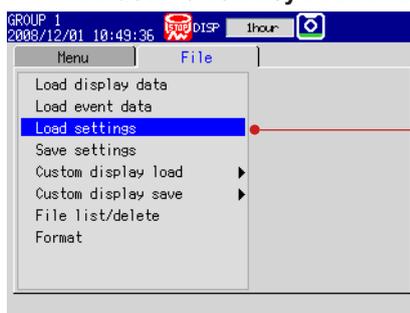

Select Load settings.

5. Press **DISP/ENTER** once to select the root directory (CF:/).

6. Press **DISP/ENTER** once to display the files in the root directory.

7. Select the file SF2 using the **up and down arrow keys**.
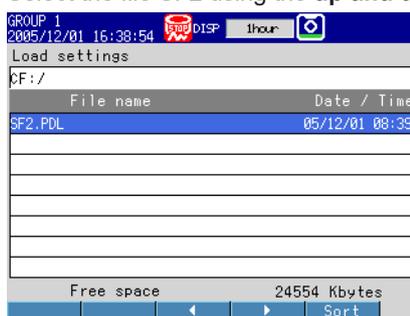

To move to a lower directory
Select the directory, and press DISP/ENTER.

To move to a higher directory
Press ESC.

8. Press **DISP/ENTER** once. The message "File is being loaded from media" appears, and the setup data is loaded. The DX automatically returns to the operation mode screen.

Operation complete.

Setting the Input Range and Alarm

Setup Example 1: Temperature Measurement Channel

DX

Type T thermocouple　　**Channel 1**
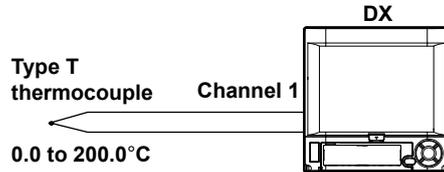

0.0 to 200.0°C

Setup Item	Description	Number in the Figure
Channel	Use channel 1.	1
Tag	TI-001	2
Sensor	Type T thermocouple	3
Input range	0.0 to 200.0°C	4

(1) Input Range

Press **MENU** (switch to the setting mode).

Select the **Menu** tab > **Meas channel** > **Range, Alarm**.
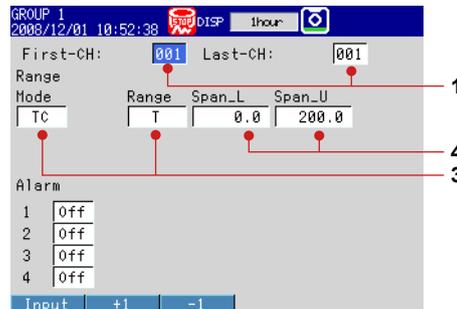

(2) Tag

Select the **Menu** tab > **Meas channel** > **Tag, Memory, Delay**.
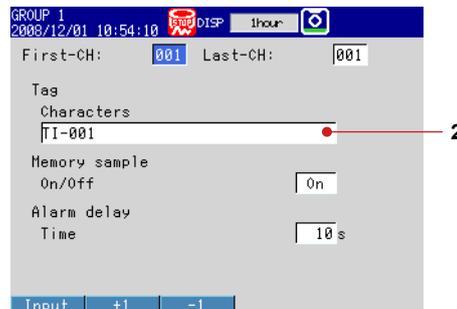

Operation complete.

Setup Example 2: Flow Rate Measurement Channel and Alarm
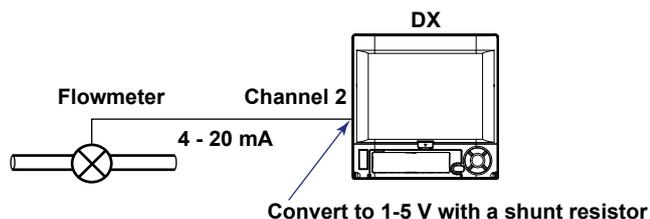

Setup Item	Description	Number in the Figure
Channel	Use channel 2.	1
Tag	FI-002	2
Input signal	1-5V	3
Input range	0.0 to 500.0 L/H	4
Alarm condition	Output an alarm if the measured value is less than or equal to 120.0 L/H. Output destination: Relay contact (I03)	5

(1) Input Range and Alarm

Press **MENU** (switch to the setting mode).

Select the **Menu** tab > **Meas channel** > **Range, Alarm**.
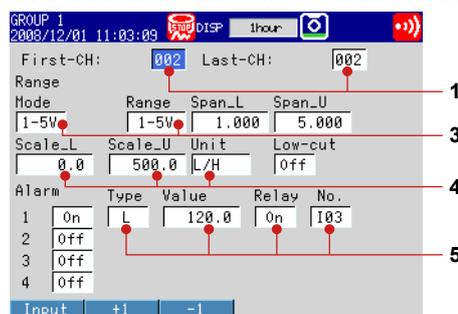

(2) Tag

Select the **Menu** tab > **Meas channel** > **Tag, Memory, Delay**.
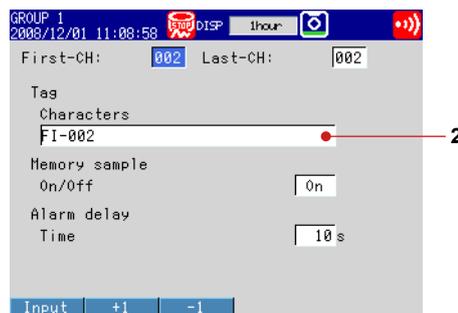

Operation complete.

Setting the Display

Setup Example 3: Assigning Channels to Groups

In this example, we will assign channels 1 and 2 to group 1.

Group 1
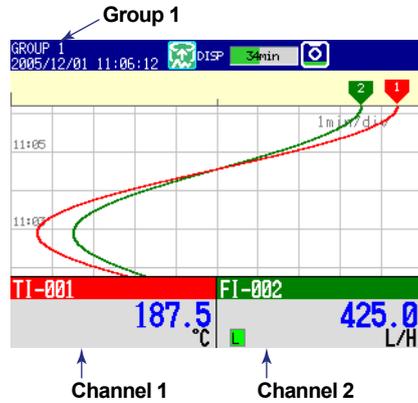

Channel 1   **Channel 2**

Setup Item	Description	Number in the Figure
Group	Assign channel 1 and 2 to group 1.	1

(1) Group

Press **MENU** (to switch to setting mode) > select the **Menu** tab > **Group set, Trip line**.
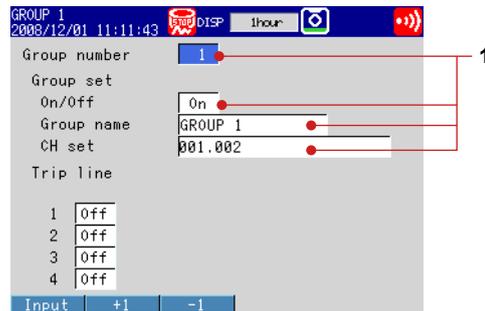

Operation complete.

Setup Example 4: Setting the Time Scale

Set the time per division of the trend waveform to 2 minutes.
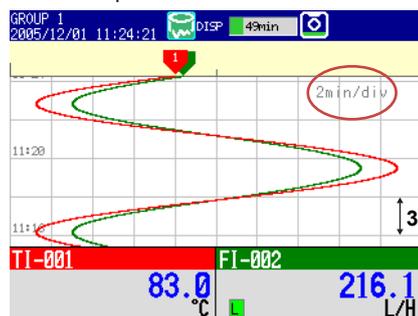

The sampling interval (the time corresponding to 1 dot) is 4 s when the trend interval is 2 min.
30 dots × 4 s = 2 min

30 dots/div

Setup Item	Description	Number in the Figure
Trend interval	Set the time per division to 2 minutes.	1
	The waveform is updated at every 4 s.	

(1) Trend interval

Press **MENU** (to switch to setting mode) > select the **Menu** tab > **Display** > **Trend/Save interval**.

Operation complete.

Setting the Data Storage

Setup Example 5: Continuously Record Measured Data and Automatically Save

In this example, we will continuously record and save the measured data of channel 1 and 2.

For the procedure to set the channel, see "Setting the Input Range and Alarm" on page 28. For the procedure to set groups, see "Setting the Display" on page 30.

Automatically save to the CF card periodically.

↑Channel 1   ↑Channel 2

Setup Item	Description	Number in the Figure
Source channels	Channel 1 (TI-001) and channel 2 (FI-002)	1
Data to be recorded	Continuously record the display data from the start of the measurement.	2
Data storage method	Automatically store every 24 hours.	3
Sampling interval	4 seconds. Set using the trend interval.	4
	Sampling interval = (trend interval setting)/30 dots[*]	
	* 40 dots when the trend interval is set to 5 or 10 seconds.	
Data file name	Add "sample" to the file name.	5
	Example: 000123_sampleYYMMDD_HHMMSS.DAD	
	↑ ↑	
	Sequential number Date/Time of the first recorded data	
Save Destination Directory	DATA-101	6

(1) Data to be Recorded

Press **MENU** (switch to the setting mode), hold down **FUNC** for 3 s (switch to the basic setting mode).

Select the **Menu** tab > **A/D, Memory.**

(2) Method of Storing to the CF Card (Auto Save ON/OFF)

Select the **Environment** tab > **Security, Media save**
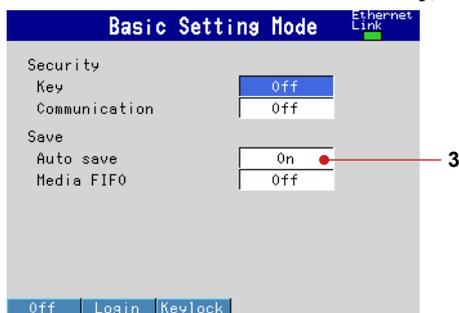

(3) Save the Settings

1. Press **ESC** to return to the basic setting menu.

2. Press **ESC** once more.
   The window appears for you to confirm the saving of the settings.

3. Select **Yes** and press **DISP/ENTER.** The DX returns to the operation mode screen.

(4) Channels to Be Recorded

Press **MENU** (switch to the setting mode).

Select the **Menu** tab > **Meas channel** > **Tag, Memory, Delay**.
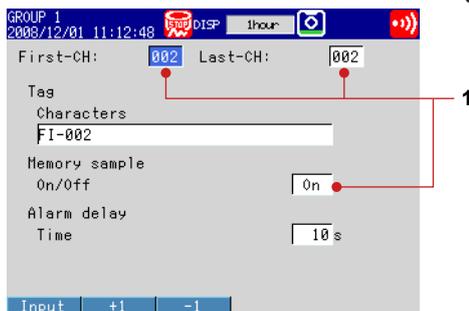

(5) Interval for Saving the Data to the CF Card

Select the **Menu** tab > **Display** > **Trend/Save interval**.

(6) Data File Name

Select the **Menu** tab > **Data save** > **File header, File name**.
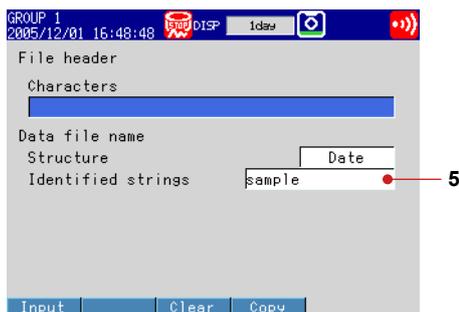

(7) Save Destination Directory (within the CF Card)
Select the **Menu** tab > **Data save** > **Save directory**.
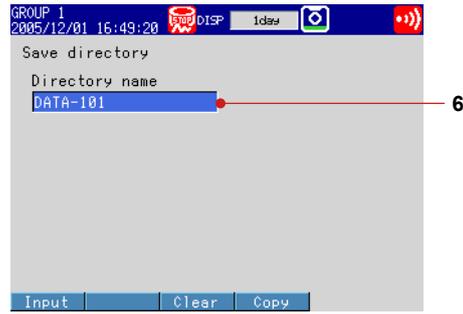

Operation complete.

Setup Example 6: Saving Measured Data at the Specified Time

Using the settings of Setup Example 5, we will save the measured data once at hour 0 every day.

Every hour 0

DX

Automatically save to the CF card

All settings other than those listed below are the same as Setup Example 5.

Setup Item	Description	Number in the Figure
Data storage time	Save the data once at hour 0 every day.	7
Data storage method	Automatically save the measured data at the specified time.	8

(1) Setting the Time

Press **MENU** (switch to the setting mode).

Select the **Menu** tab > **Timer, Event action** > **Match time timer**.

```
GROUP 1
2008/12/01 11:16:36    DISP   1hour
Timer number          1
  Kind               Day            ●
  Day                 1             ●        7
  Hour:Minute        00:00          ●
  Timer action       Repeat         ●

Input    +1    -1
```
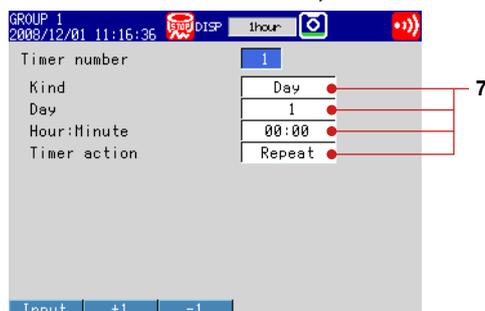

(2) Specifying the Data Storage

Select the **Menu** tab > **Timer, Event action** > **Event action**.

```
GROUP 1
2008/12/01 11:17:20    DISP   1hour
Logic box number      1
  Event              MatchTimeTimer  ●        8
    Timer number        1           ●
  Action             SaveDisplay     ●

Input    +1    -1
```
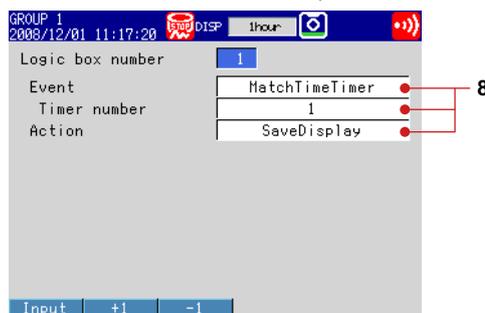

Operation complete.

Customizing the Operation

Setup Example 7: Assigning the Screen Image Data Storage Function to the USER Key

In this example, we will set the DX so that the displayed screen image data can be saved to the CF card by pressing the USER key. This function is called *snapshot*. The extension of snapshot data files is .png.
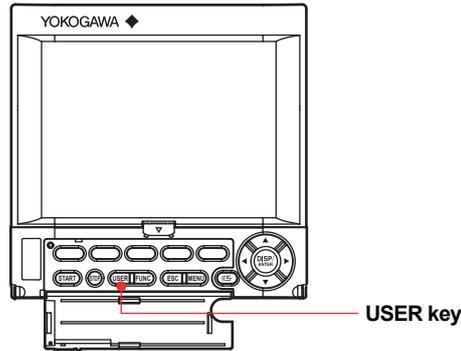

USER key

Setup Item	Description	Number in the Figure
Event action	Save the screen image data of the DX using the USER key.	1

(1) Assigning an Action to the USER Key

Press **MENU** (to switch to setting mode) > select the **Menu** tab > **Timer, Event action** > **Event action**.
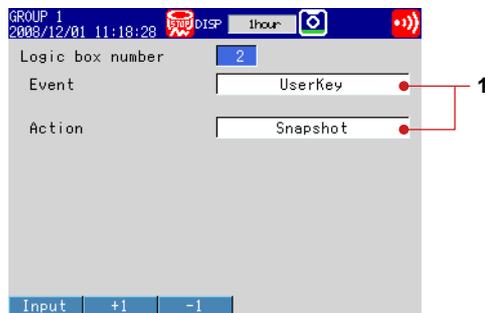

Operation complete.

Setup Example 8: Registering Frequently Used Screens to the Favorite Key

Up to eight operation mode screens that are frequently used can be registered to the Favorite key. This enables you to monitor the operation by using only the Favorite key. This feature is convenient when comparing data such as historical trends.

Operation mode screens registered to the Favorite key (example when three screens are registered)
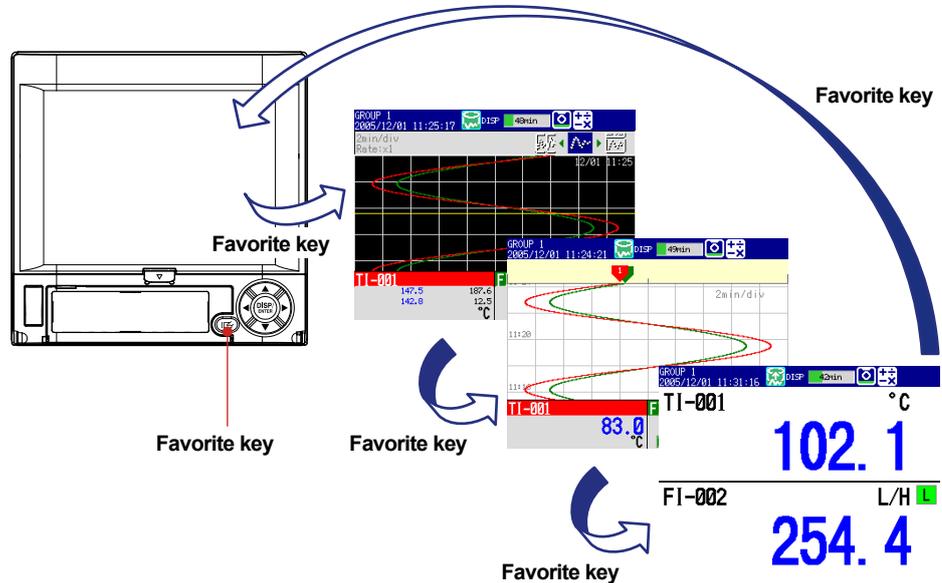

1. Display the screen to be registered.
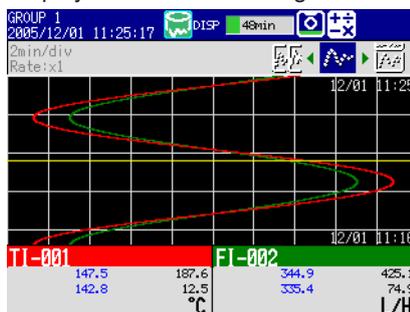

2. Press **FUNC** once to display the FUNC key menu.
3. Press the **Next** soft key to display Favorite regist.
4. Press the **Favorite regist** soft key to display the registration list window.

Show the registration list window.

5. Press the favorite number (1 to 8) soft key.

6. Press the **Regist** soft key.

Show the window for entering the display name.

7. Enter the screen name.

Select the input position:	**Left and right arrow soft keys**
Enter characters:	**Arrow keys and DISP/ENTER**
Delete a character:	Use the **arrow keys** to select **Del** and press **DISP/ENTER**, or press the **Bs soft key**.
Enter the input:	Use the **arrow keys** to select **ENT** and press **DISP/ENTER**.
Cancel the setting:	Press **ESC** before pressing **DISP/ENTER**.

For the input procedure, see "Entering Values and Characters" on page 17.

8. Press **DISP/ENTER** once.

9. Repeat steps 1 to 8 to register up to eight screens.

Operation complete.

Operation

Starting Memory Sampling

1. Press **START** once.

On a DX with advanced security (/AS1 option; release number 4 or later) display the start recording screen[*]. With **START** selected, press **DISP/ENTER** once.

Memory sampling starts.

* This is because the Batch function is enabled upon shipment from the factory.

Memory sampling progress
DISP: Display data
EVENT: Event data

Recording data

START key
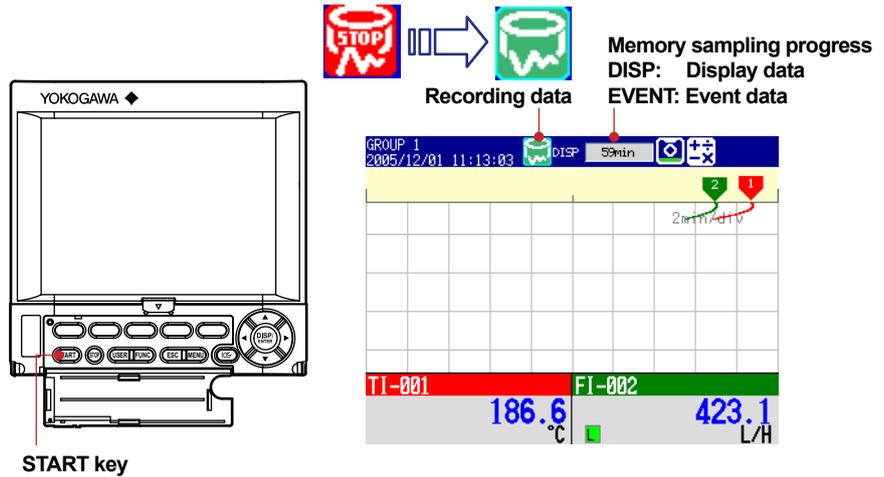

Operation complete.

Stopping Memory Sampling

1. Press **STOP** once.

Display the confirmation window.
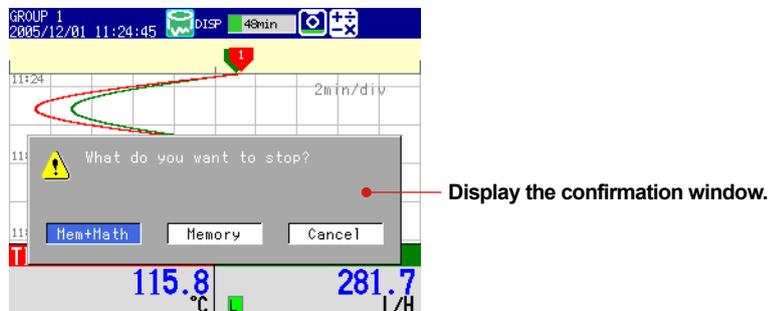

2. Select **Mem+Math** or **Memory** using the **left and right arrow keys**.

Memory: Stops memory sampling.
Mem+Math: Stops memory sampling and computation (option).

On models without the computation function (option), the confirmation message "Do you want to stop data storage?" appears. Select **Yes**.

3. Press **DISP/ENTER** once.

Stop memory sampling.

Operation complete.

Switching the Trend Display, Digital Display, and Bar Graph Display

1. Press **DISP/ENTER** once to show the display selection menu.

Left arrow key
Up arrow key
Right arrow key
DISP/ENTER key
Down arrow key
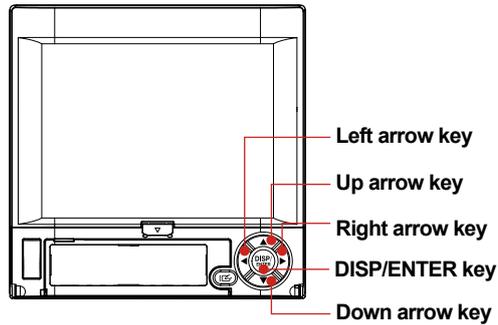

2. Press the **down arrow key** to select **TREND**, **DIGITAL**, or **BAR**.

3. Press the **right arrow key** once to display the sub menu. To close the sub menu that you opened, press the **left arrow key**.

4. Press the **down arrow key** to select the group.

Select DIGITAL > GROUP 1.
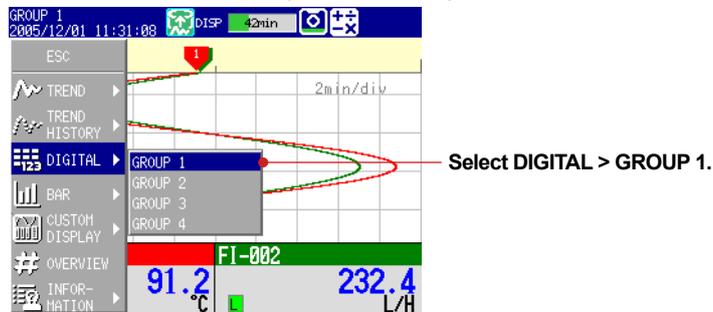

5. Press **DISP/ENTER** once to show the operation display of the selected group. To close the menu without switching the display, press **ESC**.

Group number
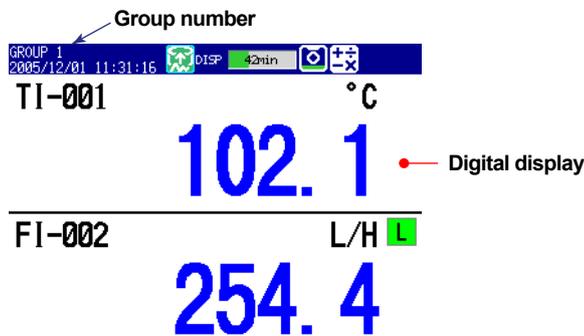

Digital display

Operation complete.

Press the **down arrow key** when the trend, digital, or bar graph is displayed to switch the display in the order trend, digital, bar graph, trend, and so on. Press the **up arrow key** to switch the display in reverse order. Press the **right arrow key** or the **left arrow key** to switch the group.

Writing the Message "START"

Registering the Word "START" in Message Number 1

On a DX with advanced security (/AS1 option; release number 4 or later), this operation is only available when memory sampling is stopped.

1. Press **MENU** (to switch to setting mode) > select the **Menu** tab > **Message, Comment** > **Message** > **DISP/ENTER**.

2. Press the **1-10** soft key.
    The message, "Message numbers 1-10 can also be used for free message" appears. Press **DISP/ENTER**.

3. Press the **down arrow key**. With **message 1** selected, press the **Input** soft key. Enter "START".
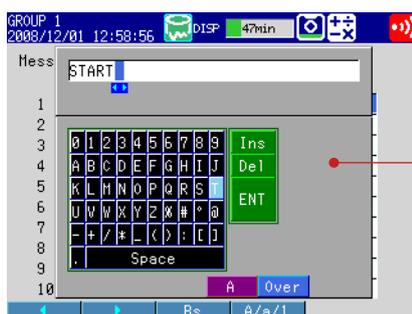

Show the message registration window.

Select the input position:	**Left and right arrow soft keys**
Enter characters:	**Arrow keys and DISP/ENTER**
Delete a character:	Use the **arrow keys** to select **Del** and press **DISP/ENTER**, or press the **Bs soft key**.
Enter the input:	Use the **arrow keys** to select **ENT** and press **DISP/ENTER**.
Cancel the setting:	Press **ESC** before pressing **DISP/ENTER**.

For the input procedure, see "Entering Values and Characters" on page 17.

4. Press **DISP/ENTER**.
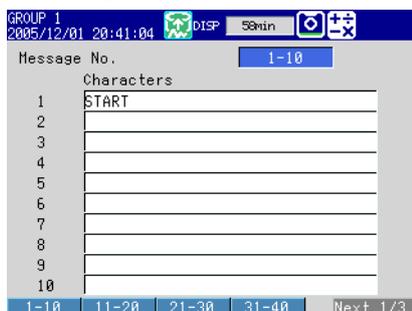

5. Press **ESC** three times or **MENU** twice to return to the operation mode screen.

    On a DX with advanced security (/AS1 option; release number 4 or later):

    Press **ESC** three times or **MENU** twice to display a confirmation screen. To return to the operation mode screen, select **Yes**, and press **DISP/ENTER** once.

    Operation complete.

Writing Message Number 1 "START"

This operation can only be carried out while memory sampling is in progress. The message is displayed on the trend display. Show the trend display first.

1. Press **FUNC** (display the FUNC key menu), press the **Message** soft key, and press the **1-10** soft key.

Show the message registration window.

1 soft key

2. Press the **1** soft key.
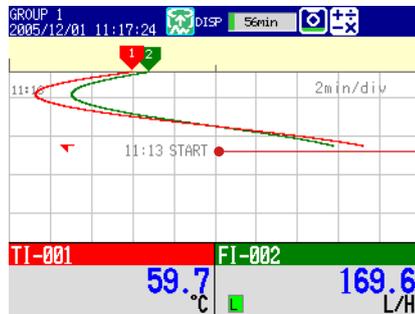

Shows the message.
(time, message, and message mark)
Also recorded to the internal memory.

Operation complete.

Connecting to an Ethernet Network

Setup Example 9: Monitoring the DX on a PC Browser

In this example, we will connect the PC and the DX via hub in a one-to-one relationship and display and monitor the DX screen on a browser on the PC.
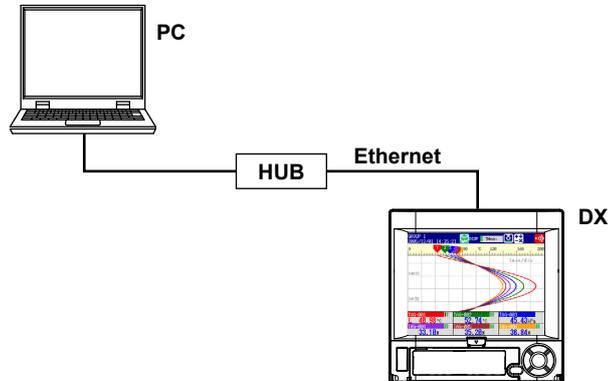

DX

Setup Item	Description	Number in the Figure
IP address	192.168.1.101	1
Subnet mask	255.255.255.0	
Web server function	Monitor from a Web browser on the PC using operator page.	2
Access to the DX	Display the Web page and do not set access privileges.	3

PC

Setup Item	Description	Number in the Figure
IP address	192.168.1.100	4
Subnet mask	255.255.255.0	

(1) IP Address of the DX

Press **MENU** (switch to the setting mode), hold down **FUNC** for 3 s (switch to the basic setting mode).

Select the **Menu** tab > **Communication (Ethernet)** > **IP-address**.
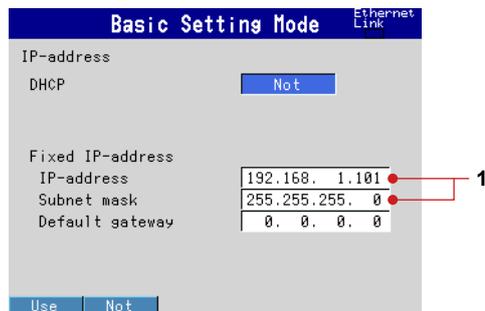

(2) Enabling the Web Server Function on the DX

Select the **Menu** tab > **Communication (Ethernet)** > **Server** > **Server**.
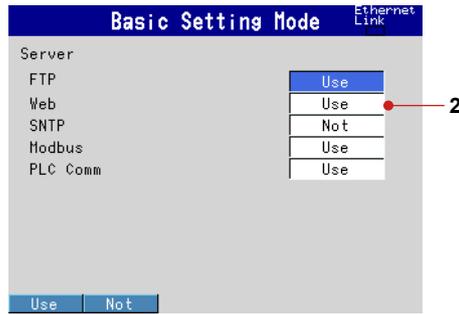

(3) Display the DX Screen on the PC

Select the **Menu** tab > **Communication (Ethernet)** > **Web page**.
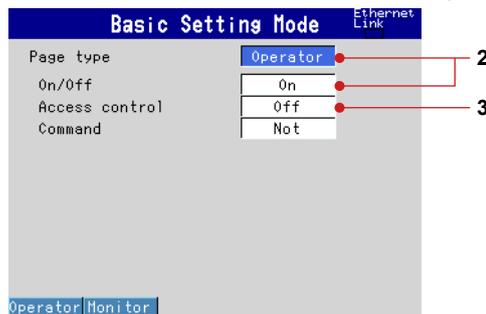

(4) Save the Settings

1. Press **ESC** twice to return to the basic setting menu.

2. Press **ESC** once more.

The window appears for you to confirm the saving of the settings.

3. Select **Yes** and press **DISP/ENTER**.

The DX returns to the operation mode screen.

(5) Setting the PC

Set the IP address and subnet mask on the PC.
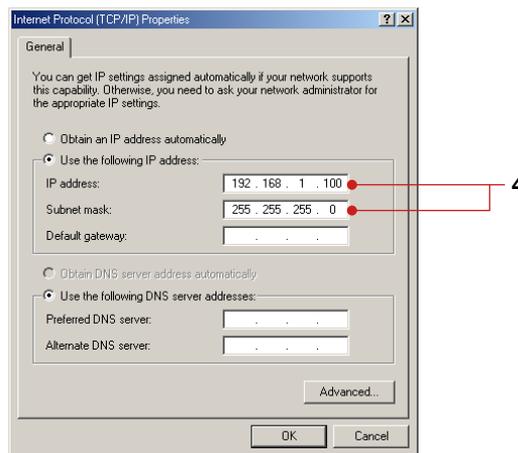

(6) Checking the Connection

Send the command below from the PC and check that a correct response is returned.

Send

>ping 192.168.1.101

Response example

>Reply from 192.168.1.101: bytes=32 time<10ms TTL=255

(7) Displaying the DX Screen on the Browser

1. Start the browser on the PC.

2. Enter the following URL.
   http://192.168.1.101/operator.htm

3. Check that the DX screen appears.
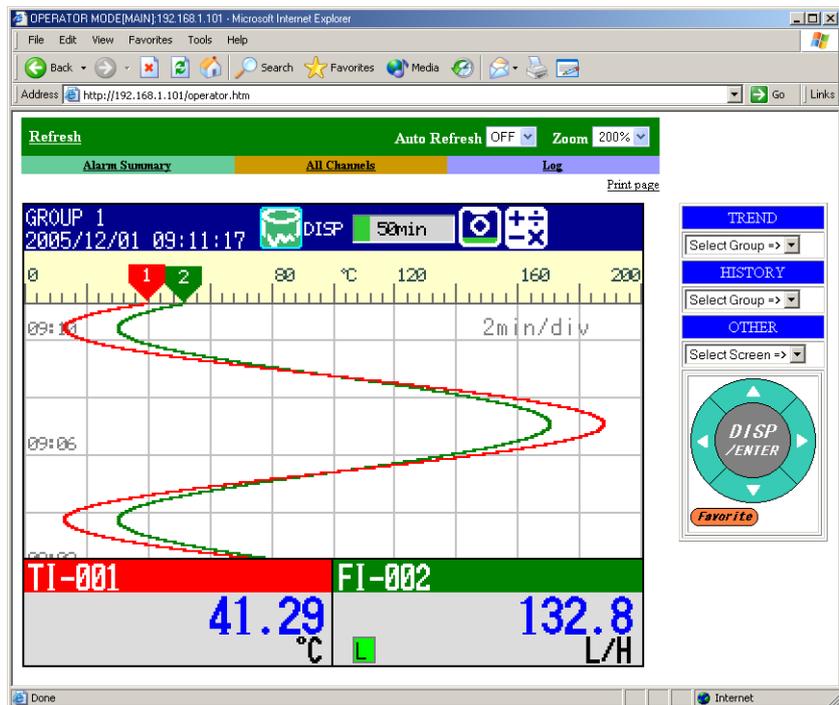

Operation complete.

Setup Example 10: Automatically Transferring the Measured Data File to an FTP Server

In this example, we will configure the DX so that the measured data is automatically transferred to an FTP server on the network when the measured data is automatically saved to the CF card.

This example assumes that the following network environment is used: DHCP enabled, automatically obtain the DNS server information, and automatically register the DX host name to the DNS server. Set the parameters according to your network environment.

Automatic data transfer to an FTP server
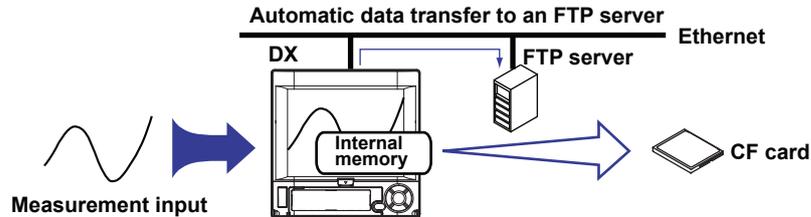

Setup Item	Description		Number in the Figure
Host name	DAQSTATION1		1
Obtain the IP address	Obtain automatically (DHCP)		2
Type of data to be transferred	Acquired measured data		3
FTP server	Server name	abcdefg.co.jp	4
	Port number	21	
	Login name	ftpuser1	
	Password	a1234	

(1) IP Address of the DX

Press **MENU** (switch to the setting mode), hold down **FUNC** for 3 s (switch to the basic setting mode).

Select the **Menu** tab > **Communication (Ethernet)** > **IP-address**.
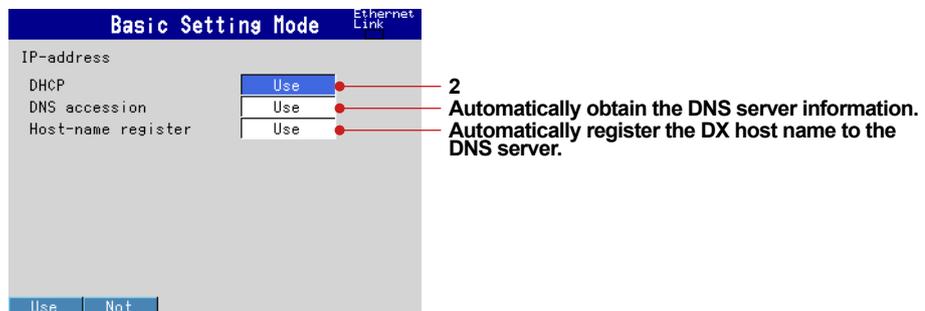

(2) Host Settings Address of the DX

Select the **Menu** tab > **Communication (Ethernet)** > **Host setting**s.
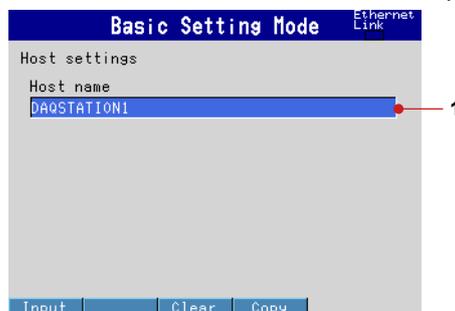

(3) Data to Be Transferred to the FTP Server

Select the **Menu** tab > **Communication (Ethernet)** > **FTP client** > **FTP transfer file**.
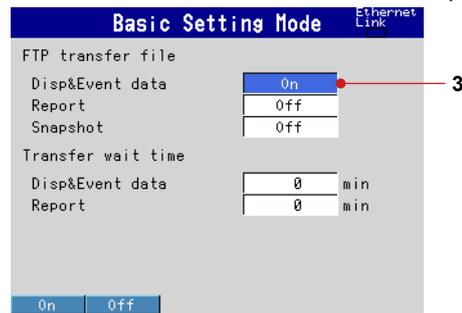

(4) Connected setting FTP Server

Select the **Menu** tab > **Communication (Ethernet)** > **FTP client** > **FTP connection**.
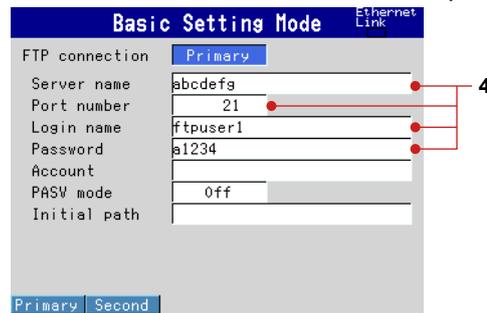

(5) Save the Settings

1. Press **ESC** three times to return to the basic setting menu.

2. Press **ESC** once more.

    The window appears for you to confirm the saving of the settings.

3. Select **Yes** and press **DISP/ENTER**.

    The DX returns to the operation mode screen.

Operation complete.

Executing a File Transfer Test

1. Press **FUNC** once to display the FUNC key menu.

2. Press the **Next** soft key until FTP test is displayed, and then press the **FTP test** soft key.
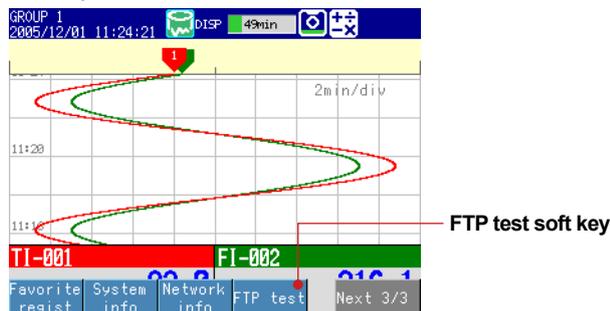

FTP test soft key

3. Press the **Primary** soft key. The messages "FTP test is being executed" and "Execution is complete" appear and the test file (FTP_TEST.TXT) is sent to the FTP server.

Operation complete.

Transferring the Data Files

When you start memory sampling, the measured data file is transferred to the FTP server when the data is saved to the CF card.

Installation and Wiring

Using DAQSTANDARD

Displaying the Measured Data on DAQSTANDARD

In this example, we will display the measured data using the software program, DAQSTANDARD.

1. Insert the CF card containing the measured data file into the PC that has DAQSTANDARD installed.

2. Start DAQSTANDARD Viewer.
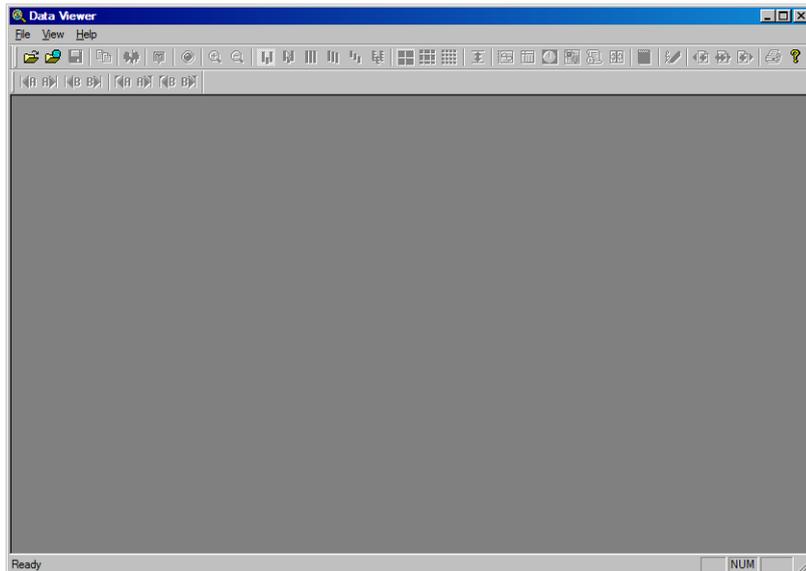

3. From the **File** menu, choose **Open**.

4. In the Open dialog box, select the desired file, and click **Open**.
   The data is displayed.
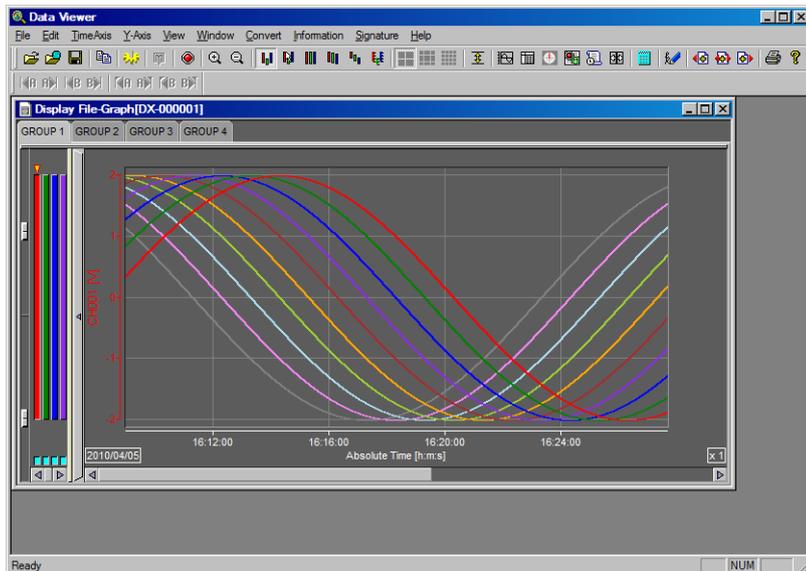

Operation complete.

Installation and Wiring

Installation Location

Install the DX indoors in a location that meets the following conditions.

- **Instrumentation Panel**
  The DX is designed to be installed in an instrumentation panel except for the desktop type.

- **Well-Ventilated Location**
  To prevent overheating, install the DX in a well-ventilated location. For the panel cut dimensions when arranging multiple DXs, see the page 51. Follow the panel cut dimensions providing adequate space between instruments when other instruments are arranged on the panel. For the desktop type, we recommend that a space of at least 50 mm be provided around the left, right, top, and rear panels of the DX.

- **Minimum Mechanical Vibrations**
  Choose an installation location with the minimum mechanical vibration. Installing the DX in a location with large mechanical vibration not only causes adverse effects on the mechanism but also may hinder normal recording.

- **Horizontal**
  Install the DX horizontally (However, the DX can be inclined up to 30 degrees backwards for panel mounting).

- **Ambient temperature range between 0 to 50°C**

- **Ambient humidity between 20 to 80%RH (However, less than moisture content of 40°C 80% RH at 40°C or more), No condensation should be present.**

- **Altitude 2000 m or less**

  Note
  Condensation may occur if the DX is moved to another place where the ambient temperature is higher, or if the temperature changes rapidly. In addition, measurement errors will result when using thermocouples. If this happens, let the DX adjust to the new environment for at least one hour before using it.

Do not install the DX in the following places.

- **Outdoors**
- **In Direct Sunlight or Near Heat Sources**
  Install the DX in a place with small temperature fluctuations near room temperature (23°C). Placing the DX in direct sunlight or near heat appliances can cause adverse effects on the internal circuitry.

- **Where an Excessive Amount of Soot, Steam, Moisture, Dust, or Corrosive Gases Are Present**
  Soot, steam, moisture, dust, and corrosive gases will adversely affect the DX. Avoid such locations.

- **Near Strong Magnetic Field Sources**
  Do not bring magnets or instruments that produce electromagnetic fields close to the DX. Operating the DX in strong magnetic fields can cause errors in the measurements.

- **Where the Viewing of the Display Is Poor**
  The DX uses a TFT color LCD for the display. Therefore, viewing of the display from an extreme angle is difficult. Install the DX so that the user can view the display from the front.

Installation Procedure

Installation Procedure (Panel Mount Type)

Use a steel panel of thickness 2 mm to 26 mm.

1. Insert DX from the front of the panel.

2. Mount the DX to the panel using the mounting brackets that come with the package as shown in the figure below.
   - Use two brackets to support the top and bottom or the left and right sides of the case (remove the seal that is covering the holes for the mounting brackets beforehand).
   - The proper torque for tightening the mounting screws is 0.7 to 0.9 N•m.
   - Mount the DX to the rack according to the procedure below.
     - First, attach the two mounting brackets and temporarily fasten the attachment screws.
     - Next, fix the DX in place by tightening the attachment screws with the appropriate torque. When the DX is approximately perpendicular to the panel as you fasten the screws, press the mounting bracket against the case so that they are in contact with each other.

⚠ CAUTION

- Tightening the screws too much can deform the case or damage the bracket.
- Be careful not to insert foreign objects or tools through the holes for the mounting brackets in the case.

Panel Mounting Diagram
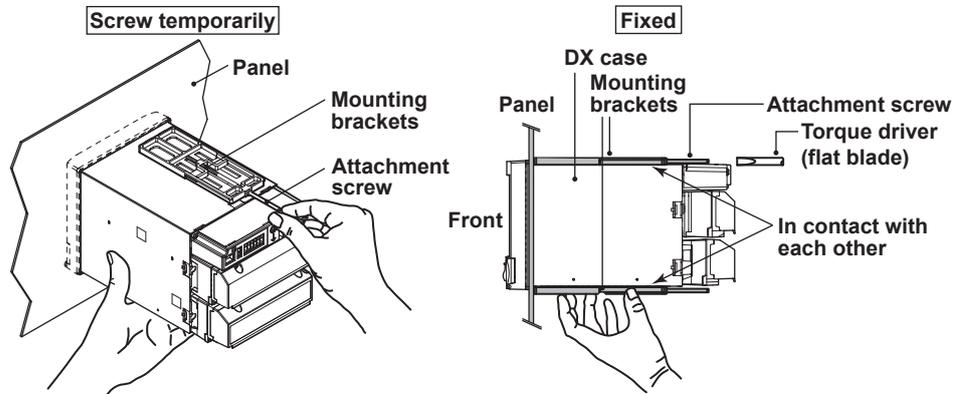

(The figure shows the case when the mounting brackets are used on the top and bottom of the case.)

Note

To achieve sufficient dust and water proof performance, mount the DX in the middle of the panel cut out.

Installation (Desktop Type (/H5[ ] Option)

The front (leg) stand can be pulled out.

CAUTION

On the desktop type, do not apply force to the DX when the front leg (stand) is out. This can break the front leg.

External Dimensions and Panel Cut Dimensions

Unit: mm (approx. inch)
Unless otherwise specified, tolerance is ±3%
(however, tolerance is ±0.3 mm when below 10 mm).

Input Signal Wiring

⚠️

WARNING

- To prevent electric shock while wiring, ensure that the power supply source is turned OFF.

CAUTION

- If a strong tension is applied to the cable wired to the DX, the terminals of the DX and/or the cable can be damaged. In order to prevent tension from being applied directly on the terminals, fasten all wiring cables to the rear of the mounting panel.
- To prevent fire, use signal wires having a temperature rating of 70°C or more.
- Do not apply a voltage exceeding the following value to the input terminals. Otherwise, damage to the DX may result.
  - Maximum input voltage: ±60 VDC
  - Maximum common mode voltage: ±60 VDC (under measurement category II conditions)

Precautions to Be Taken While Wiring

Take the following precautions when wring the input signal cables.

When using a screw terminal, we recommend that you use a crimp-on lug with an insulation sleeve (designed for 4-mm screws).

Crimp-on lug with insulation sleeves (for 4 mm screws)

When using a clamp terminal (/H2), we recommend that you use the following kind of cable:
- Conductive cross-sectional area: 0.08 mm2 to 1.5 mm2 (AWG 28 to 16)
- Length of the stripped section of the wire: Approx. 7 mm

Take measures to prevent noise from entering the measurement circuit.
- Move the measurement circuit away from the power cable (power circuit) and ground circuit.
- It is desirable that the object being measured does not generate noise. However, if this is unavoidable, isolate the measurement circuit from the object. Also, ground the object being measured.
- Shielded wires should be used to minimize noise caused by electrostatic induction. Connect the shield to the ground terminal of the DX as necessary (make sure you are not grounding at two points).
- To minimize noise caused by electromagnetic induction, twist the measurement circuit wires at short, equal intervals.
- Make sure to earth ground the protective ground terminal through minimum resistance (less than 100 Ω).

Do not allow static electricity to be applied to the terminals.
- When wiring the terminals, remove static electricity so that static electricity is not applied.
- If static electricity or similar high-voltage transient noise is applied to the signal line, the system may break.

When using internal reference junction compensation on the thermocouple input, take measures to stabilize the temperature at the input terminal.
- Always use the terminal cover.
- Do not use thick wires which may cause large heat dissipation (cross sectional area of 0.5 mm^2 or less recommended).
- Make sure that the ambient temperature remains reasonably stable. Large temperature fluctuations can occur if a nearby fan turns ON or OFF.

Connecting the input wires in parallel with other devices can cause signal degradation, affecting all connected devices. If you need to make a parallel connection, then
- Turn the burnout detection function OFF.
- Ground the instruments to the same point.
- Do not turn ON or OFF another instrument during operation. This can have adverse effects on the other instruments.
- RTDs cannot be wired in parallel.

Wiring Procedure

A terminal cover is screwed in place on the measuring input terminal block on the rear panel. A label indicating the terminal arrangement is affixed to the cover.

1. Turn OFF the DX and remove the terminal cover.

2. Connect the signal wires to the terminals.

Recommended torque for tightening the screws	Screw terminals	0.9 to 1.0 N•m
	Clampted terminals	0.22 to 0.25 N•m

3. Replace the terminal cover and fasten it with screws. The proper torque for tightening the screws is 0.6 N•m.

Note

Input signal wires of diameter less than or equal to 0.3 mm may not be secured firmly for clamped terminals (/H2). Fold over the conducting section of the wire, for example, to make sure that the wire is securely connected to the clamped terminal.

**Example: For 4 to 20 mA input, use a
shunt resistor of 250 Ω±0.1%.**
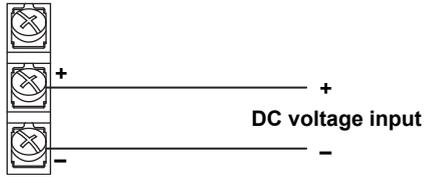

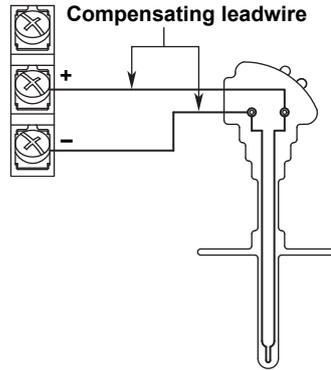

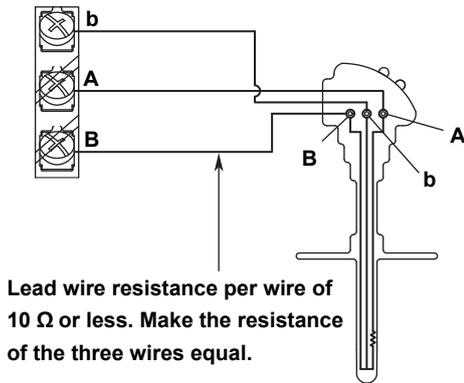

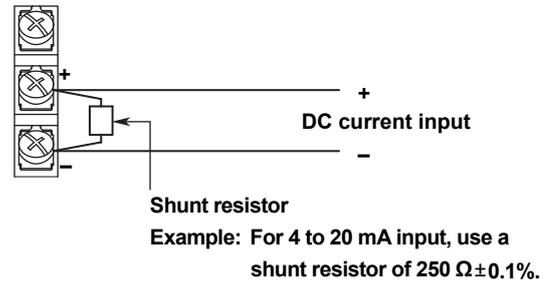

Wiring Clamped Terminals

CAUTION

As of August, 2007, the direction of the terminal blocks for the clamp input terminals
(/H2 option) has changed. To use clamp input terminal blocks wired for use with
previous YOKOGAWA recorders, rewire them to match the DX.

Remove the terminal block
Hold both ends of the terminal
block and pull straight.
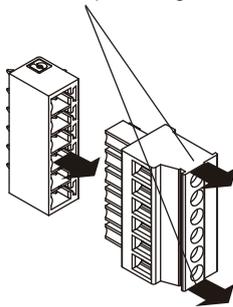

Connect the wires

Recommended
length of stripped
wire: 7 mm
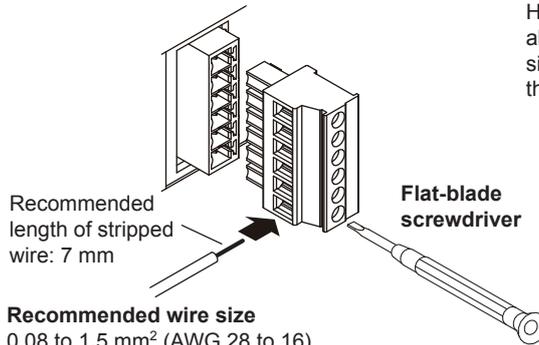

Recommended wire size
0.08 to 1.5 mm² (AWG 28 to 16)
Input signal wire
First, loosen the screw at the front using a flat-blade
screwdriver. Insert the input signal wire into the slit on the
left side of the terminal block, and fasten the screw at the front.

**Flat-blade
screwdriver**

Connect the terminal block
Hold both ends of the terminal block,
align with the connector on the DX
side, and push the terminal block into
the connector.
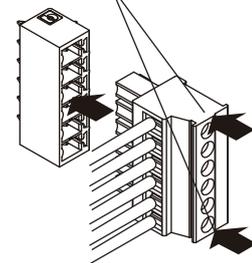

Note

RTD input terminals A and B are isolated on each channel. Terminal b is shorted internally
across all channels. However, terminal b is also isolated on each channel on models with the
/N1 option (Cu10, Cu25 RTD input/3 leg isolated RTD) and /N2 option (3 leg isolated RTD).

Optional Terminal Wiring

WARNING

- To prevent electric shock while wiring, ensure that the power supply source is turned OFF.
- If a voltage of more than 30 VAC or 60 VDC is to be applied to the output terminals, use ring-tongue crimp-on lugs with insulation sleeves on all terminals to prevent the wires from slipping out when the screws become loose. Furthermore, use double-insulated wires (dielectric strength of 3000 VAC or more) for the signal wires on which a voltage of more than 30 VAC or 60 VDC is to be applied. For all other wires, use basic insulated wires (dielectric strength of 1500 VAC). To prevent electric shock, attach the terminal cover after wiring and make sure not to touch the terminals.

CAUTION

- Use the following circuit voltage for the connection to the alarm/FAIL/status output terminal.
  - When the connection is to Mains Circuits (primary AC power source circuits): 150 V or less
  - When the connection is to circuits derived from Mains Circuits (secondary circuits): 250 V or less
    (Mains Circuits voltage is less than 300 V, and connection must be used by isolation transformer.)
- To prevent fire, use signal wires having a temperature rating of 70°C or more.
- If a strong tension is applied to the cable wired to the DX, the terminals of the DX and/or the cable can be damaged. In order to prevent tension from being applied directly on the terminals, fasten all wiring cables to the rear of the mounting panel.
- Do not short the transmitter power supply output terminal or apply external voltage to it. If you do, the DX may malfunction.
- When using the transmitter power supply output terminal, do not use current that exceeds the maximum output current (25 mADC). If you do, the DX may malfunction.

Note

For remote control wiring, use shielded wires to reduce noise. Connect the shield to the functional ground terminal or the ground terminal of the DX.

Precautions to Be Taken While Wiring

It is recommended that crimp-on lug with insulation sleeves (designed for 4-mm screws) be used when connecting wires to the optional input terminals.

Crimp-on lug with insulation sleeves (for 4-mm screws)

Wiring Procedure

As shown in the figure on next page, the optional terminal block is located on the rear panel. The optional terminal block is provided on the DX when an option that requires input/output is installed such as the alarm output relay (/A[ ] option), FAIL/status output relay (/F1 option), and remote control function (/R1 option), etc. A terminal cover is screwed in place on the measuring input terminal block. A label indicating the terminal arrangement is affixed to the cover.

1. Turn OFF the DX and remove the terminal cover.

2. Connect the signal wires to the terminals. The recommended torque for tightening the screws is 0.9 to 1.0 N•m

3. Replace the terminal cover and fasten it with screws. The proper torque for tightening the screws is 0.6 N•m.

Alarm Output Terminal (/A1, /A2, and /A3), FAIL Output Terminal, and Status Output Terminal (/F1)

	Output format:	Relay contact
NC	Contact rating:	250 VAC (50/60 Hz)/3 A,
C		250 VDC/0.1 A (for resistor load)
NO	Withstand voltage:	1600 VAC at 50/60 Hz for one minute (between output terminals and the ground terminal)

FAIL output (/F1)	NO C NC During normal operation	NO C NC When a failure occurs	NO C NC When power is turned OFF
Other output (/F1)	NO C NC During normal operation	NO C NC When specified status occurs	NO C NC When power is turned OFF

Remote Control Input Terminal (/R1)

• Relay contact input (voltage-free contact)
Contact closed at 200 Ω or less
Contact open at 100 kΩ or greater

• Transistor input (open collector)
ON voltage: 0.5 V or less (30 mADC)
Leakage current when turned OFF: 0.25 mA or less

Internal circuit

Input format:
Photocoupler isolation
Shared common (C)
Allowable input voltage:
5 VDC
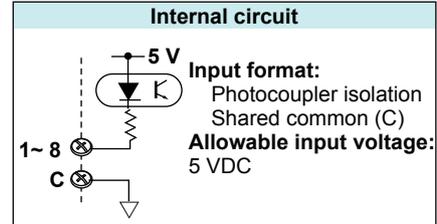

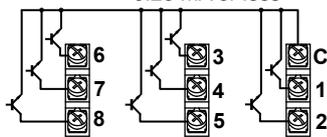

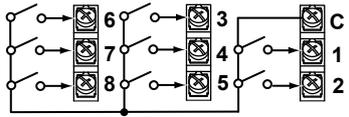

Withstand voltage: 1000 VDC for one minute between input terminals and the ground terminal

Pulse Input Terminal (/PM1)

• Relay contact input (voltage-free contact)
Contact closed at 200 Ω or less
Contact open at 100 kΩ or greater

•Transistor input (open collector)
ON voltage: 0.5 V or less (30 mADC)
Leakage current when turned OFF: 0.25 mA or less

Internal circuit

Input format:
Photocoupler isolation
Shared common (L)
Allowable input voltage:
30 VDC
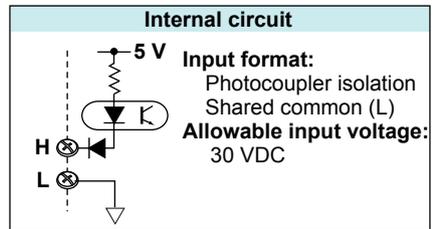

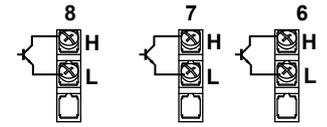

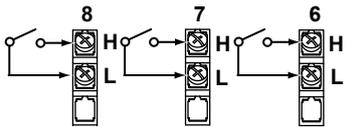

Withstand voltage: 1000 VDC for one minute between input terminals and the ground terminal

24 VDC Transmitter Power Supply Output Terminal (/TPS2 and /TPS4)

Connect the DX to the transmitter as shown below.

DX
Transmitter power supply output terminal
Current
Transmitter
Input terminal
Shunt resistor: 250 Ω
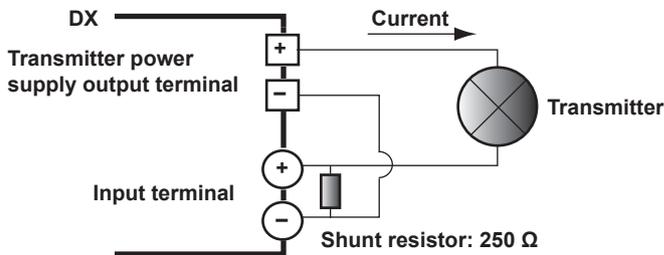

Note

To reduce noise, use a shielded cable for wiring. Connect the shield to the functional ground terminal or the ground terminal of the DX.

Serial Interface

Connecting to the RS-232 Connector (/C2)

1 2 3 4 5
6 7 8 9
(male)
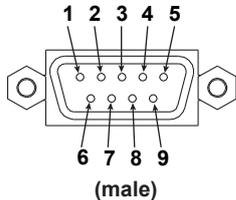

2	RD (Received Data):	Received data from the PC. Input signal to the DX.
3	SD (Send Data):	Transmitted data to the PC. Output signal from the DX.
5	SG (Signal Ground):	Signal ground.
7	RS (Request to Send):	Handshaking signal when receiving data from the PC. Output signal from the DX.
8	CS (Clear to Send):	Handshaking signal when transmitting data to the PC. Input signal to the DX.

* Pins 1, 4, 6, and 9 are not used.

Connecting to the PROFIBUS-DP Connector (/CP1)

5 4 3 2 1
9 8 7 6
(female)
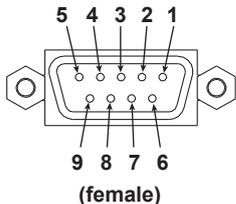

3	RxD/TxD-P:	Positive data input/output.
4	CNTR-P:	RTS (needed when using a repeater).
5	DGND:	Ground.
6	VP +5V:	+5 V.
8	RxD/TxD-N:	Negative data input/output.

* Pins 1, 2, 7, and 9 are not used.
** The DX does not have a built-in terminator. If you need to terminate the cable at the DX, use a terminated connector.

Connecting to the RS-422/485 (/C3)

Four-wire system   **Two-wire system**

FG (Frame Ground)   Frame ground of the DX.
SG (Signal Ground)   Signal ground.
SDB (Send Data B)   Send data B (+).
SDA (Send Data A)   Send data A (–).
RDB (Received Data B)   Receive data B (+).
RDA (Received Data A)   Receive data A (–).

← Shield
Electric potential of the shield

Recommended length of stripped wire: 9 mm. Recommended tightening torque: 0.4-0.5 N•m

Cable
There are two types of cables available, the four-wire cable and the two-wire cable (used only for the Modbus protocol). The cable should meet the following specifications.
• Type: Shielded twisted pair cable: 3 pairs 24 AWG or more (four-wire),
   2 pair 24 AWG or more (two-wire)
• Characteristic impedance: 100 Ω
• Capacitance: 50 pF/m
• Total cable length: Up to 1.2 km

Connecting to the USB Port (/USB1)
The USB port complies with Rev. 1.1.

Front   **Rear**
   USB port
← USB port

Connecting to the Ethernet Port

Ethernet port
Indicator

CAUTION

Do not connect an Ethernet cable whose plug does not comply with FCC specifications. If you do, the DX may malfunction.

Checking the Connection/Communication Status
You can check the connection status of the Ethernet interface with the indicators that are located above the Ethernet connector of the DX.

Indicator	Connection Status of the Ethernet Interface
Illuminated (green)	The Ethernet interface is electrically connected.
Blinking (red)	Transmitting data.
Off	The Ethernet interface is not electrically connected.

Checking the Connection on the DX Display
• **Checking the Connection at the status indication section of the DX display.**
You can check the connection status of the Ethernet interface on the Ethernet Link indicator located on the right side of the status display section of the basic setting mode display. The basic setting menu appears by pressing **MENU** to display the setting menu followed by **FUNC** for approximately 3 s.

• **Checking the Connection Status in the Display Section in the Upper Right Corner of the COMMUNICATION LOG Display of the DX**
You can check the connection status of the Ethernet interface on the Link indicator on the display section in the upper right corner of the COMMUNICATION LOG display.

Indicator	Connection Status of the Ethernet Interface
Illuminated (green)	The Ethernet interface is electrically connected.
Off	The Ethernet interface is not electrically connected.

Power Supply Wiring

Panel Mount Type, or Desktop Type with /P1 (Models with /H5 and /P1 Options)

Precautions to Be Taken While Wiring the Power Supply

Make sure to follow the warnings below when wiring the power supply. To prevent electric shock and damage to the DX, observe the following warnings.

WARNING

- To prevent electric shock when wiring, ensure the main power supply is turned OFF.
- To prevent the possibility of fire, use 600 V PVC insulated wire (AWG20-16) or an equivalent wire for power wiring.
- Make sure to earth ground the protective earth terminal through a grounding resistance less than 100 Ω before turning ON the power.
- Use crimp-on lug with insulation sleeves (for 4-mm screws) for power supply wires and protective grounding wires.
- To prevent electric shock, make sure to close the transparent cover for the power supply wires.
- Make sure to provide a power switch (double-pole type) on the power supply line in order to separate the DX from the main power supply. Put an indication on this switch as the breaker on the power supply line for the DX and indications of ON and OFF.
  Switch specifications
    Steady-state current rating: 1 A or more (other than /P1), 3 A or more (/P1).
    Inrush current rating: 60 A or more (other than /P1), 70 A or more (/P1).
    Use a switch complies with IEC60947-1, 3.
- Connect a fuse (between 2 A and 15 A) to the power line. Use a fuse approved by CSA (for the use in North America) or VDE (for the use in Europe).
- Do not add a switch or fuse to the ground line.

Use a power supply that meets the following conditions:

Item	Other than /P1	/P1
Rated supply voltage	100 to 240 VAC	24 VDC/AC
Allowable power supply voltage range	90 to 132, 180 to 264 VAC	21.6V to 26.4 VDC/AC
Rated power supply frequency	50/60 Hz	50/60 Hz (for AC)
Allowable power supply frequency range	50/60 Hz ± 2%	50/60 Hz ± 2% (for AC)
Maximum power consumption	45 VA (100 V)/60 VA (240 V)	28 VA (for DC), 45 VA (for AC)

Note

Do not use a supply voltage in the range 132 to 180 VAC, as this may have adverse effects on the measurement accuracy.

Wiring Procedure

1. Turn OFF the power to the DX and open the transparent power terminal cover.

2. Wire the power cord and the protective ground cord to the power supply terminals. Use ring-tongue crimp-on lugs (designed for 4 mm screws). The proper torque for tightening the screw is 1.4 to 1.5 N•m (12.4 to 13.2 inch•lbs).

Other than /P1

100-240V	AC~	
50/60Hz	60VA MAX	⚠
L	N	⏚

/P1
(24 VDC/AC power supply)

24V DC	28VA MAX	
24V AC ~50/60Hz	45VA MAX	⚠
L(+)	N(-)	⏚

Note
Do not wire the protective grounding cord to the functional ground terminal.

Functional ground terminal

Protective grounding cord

Power cord
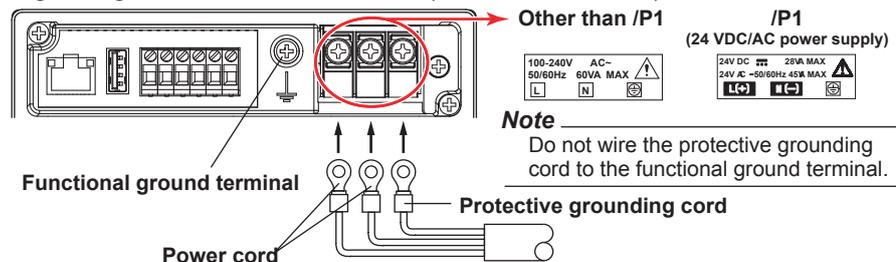

3. Replace the power terminal cover, and fasten it with screws.

Desktop Type (/H5[ ] Option)
Precautions to Be Taken While Connecting the Power Supply

Make sure to follow the warnings below when connecting the power supply. To prevent electric shock and damage to the DX, observe the following warnings.

⚠

WARNING

- Before connecting the power cord, ensure that the source voltage matches the rated supply voltage of the DX and that it is within the maximum rated voltage range of the provided power cord.
- Connect the power cord after checking that the power switch of the DX is turned OFF.
- To prevent electric shock or fire, be sure to use the power cord supplied by YOKOGAWA.
- Make sure to perform protective earth grounding to prevent electric shock. Connect the power cord of the desktop type to a three-prong power outlet with a protective earth terminal.
- Do not use an extension cord without protective earth ground. Otherwise, the protection function will be compromised.

Use a power supply that meets the following conditions:

Item	Condition
Rated supply voltage	100 to 240 VAC
Allowable power supply voltage range	90 to 132, 180 to 264 VAC
Rated power supply frequency	50/60 Hz
Allowable power supply frequency range	50/60 Hz ± 2%
Maximum power consumption	45 VA (100V) and 60 VA (240 V)

Note
Do not use a supply voltage in the range 132 to 180 VAC, as this may have adverse effects on the measurement accuracy.

Connection Procedure

1. Check that the power switch is OFF.

2. Connect the power cord plug to the power connector on the rear panel. (Use the power cord that comes with the package.)
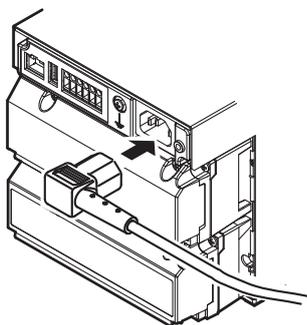

3. Check that the power outlet meets the conditions given in the table above and that the supply voltage is within the maximum rated voltage range of the power cord that comes with the package. Then, connect the other end of the power cord to the power outlet. The AC outlet must be of a three-prong type with a protective earth ground.

Recommended Replacement Periods for Worn Parts

To preserve the reliability of the DX and to use the DX in a good condition for an extended time, it is recommended that periodic replacements be made on parts. The replacement parts may change to accommodate preventive maintenance over extended time. Be sure to check with your nearest YOKOGAWA dealer.

The following table shows the recommended replacement period for expendable parts. The replacement period shown here applies when the recorder is used under standard operating conditions. For the actual replacement period, consider the actual conditions of use. Replacement of parts will be carried out by a YOKOGAWA engineer or an engineer certified by YOKOGAWA. Contact your nearest YOKOGAWA dealer when such replacement is necessary.

Item	Replacement period	Name	Part No.	Quantity Used	Notes
LCD	5 years	TOP BEZEL Assembly	B8705KY	1	For DX1000 Style number H: 5 without /KB1 and KB2 options
			B8705KZ	1	For DX1000 Style number H: 5 with /KB1 or KB2 option
			B8705KB	1	For DX1000N Style number H: 5 without /KB1 and KB2 options
			B8705KJ	1	For DX1000N Style number H: 5 with /KB1 or KB2 option
Battery	10 years	Battery Assembly	B8800ZK	1	
Dust and water proof strip	5 years	Packing	B8705FY	1	
	5 years	Key Case Assembly	B8705BM	1	Without /KB1 or /KB2
	5 years	Key Case Assembly	B8705BY	1	With /KB1 or /KB2
Aluminum electrolytic capacitor	5 years*	Power Supply Assembly	–	1	
	5 years*	AD Assembly	Depends on the model		

* Replacement period at the upper limit of the normal operating temperature (50°C)
The replacement period varies depending on the operating temperature and the specifications of the DX.
The lower the operating temperature, the longer is the replacement period. For example, if the operating temperature is 30°C, it may be possible to use the parts for more than 10 years.

Note

- The LCD replacement period indicates the half life of the brightness when the brightness is set to the factory default setting. The half life is shortened as the brightness is set higher. The deterioration of brightness varies depending on the condition of use, and its determination is subjective. Consider these facts for determining the actual replacement period.
- The color of the LCD may become yellowish as time elapses. The discoloration tends to progress faster as the brightness is set higher.
